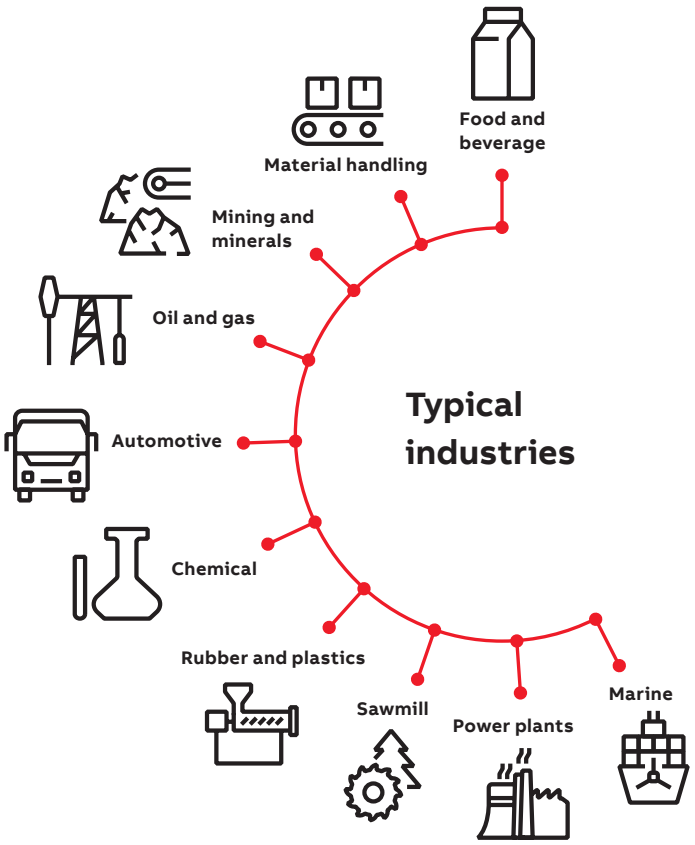
The all-compatible ACS880 series
Uncompromised productivity

ABB's benchmark of performance, expertise and quality designed to tackle any of your motor-driven applications, in any industries, whatever the power range. The AC880 is an all-compatible ABB industrial drive, offered in a range of wall-mounted drives, drive modules and cabinet-built drives.



ABB's all-compatible drives are designed to provide customers across industries and applications with unprecedented levels of compatibility and flexibility. They are customized to meet the particular needs of specific industries such as oil and gas, mining, metals, chemicals, cement, power plants, material handling, pulp and paper, sawmills, marine, water and wastewater, food and beverage, and automotive. They can control a wide range of applications, including cranes, winches, winders, conveyors, mixers, compressors, centrifuges, test benches, elevators, extruders, pumps and fans.

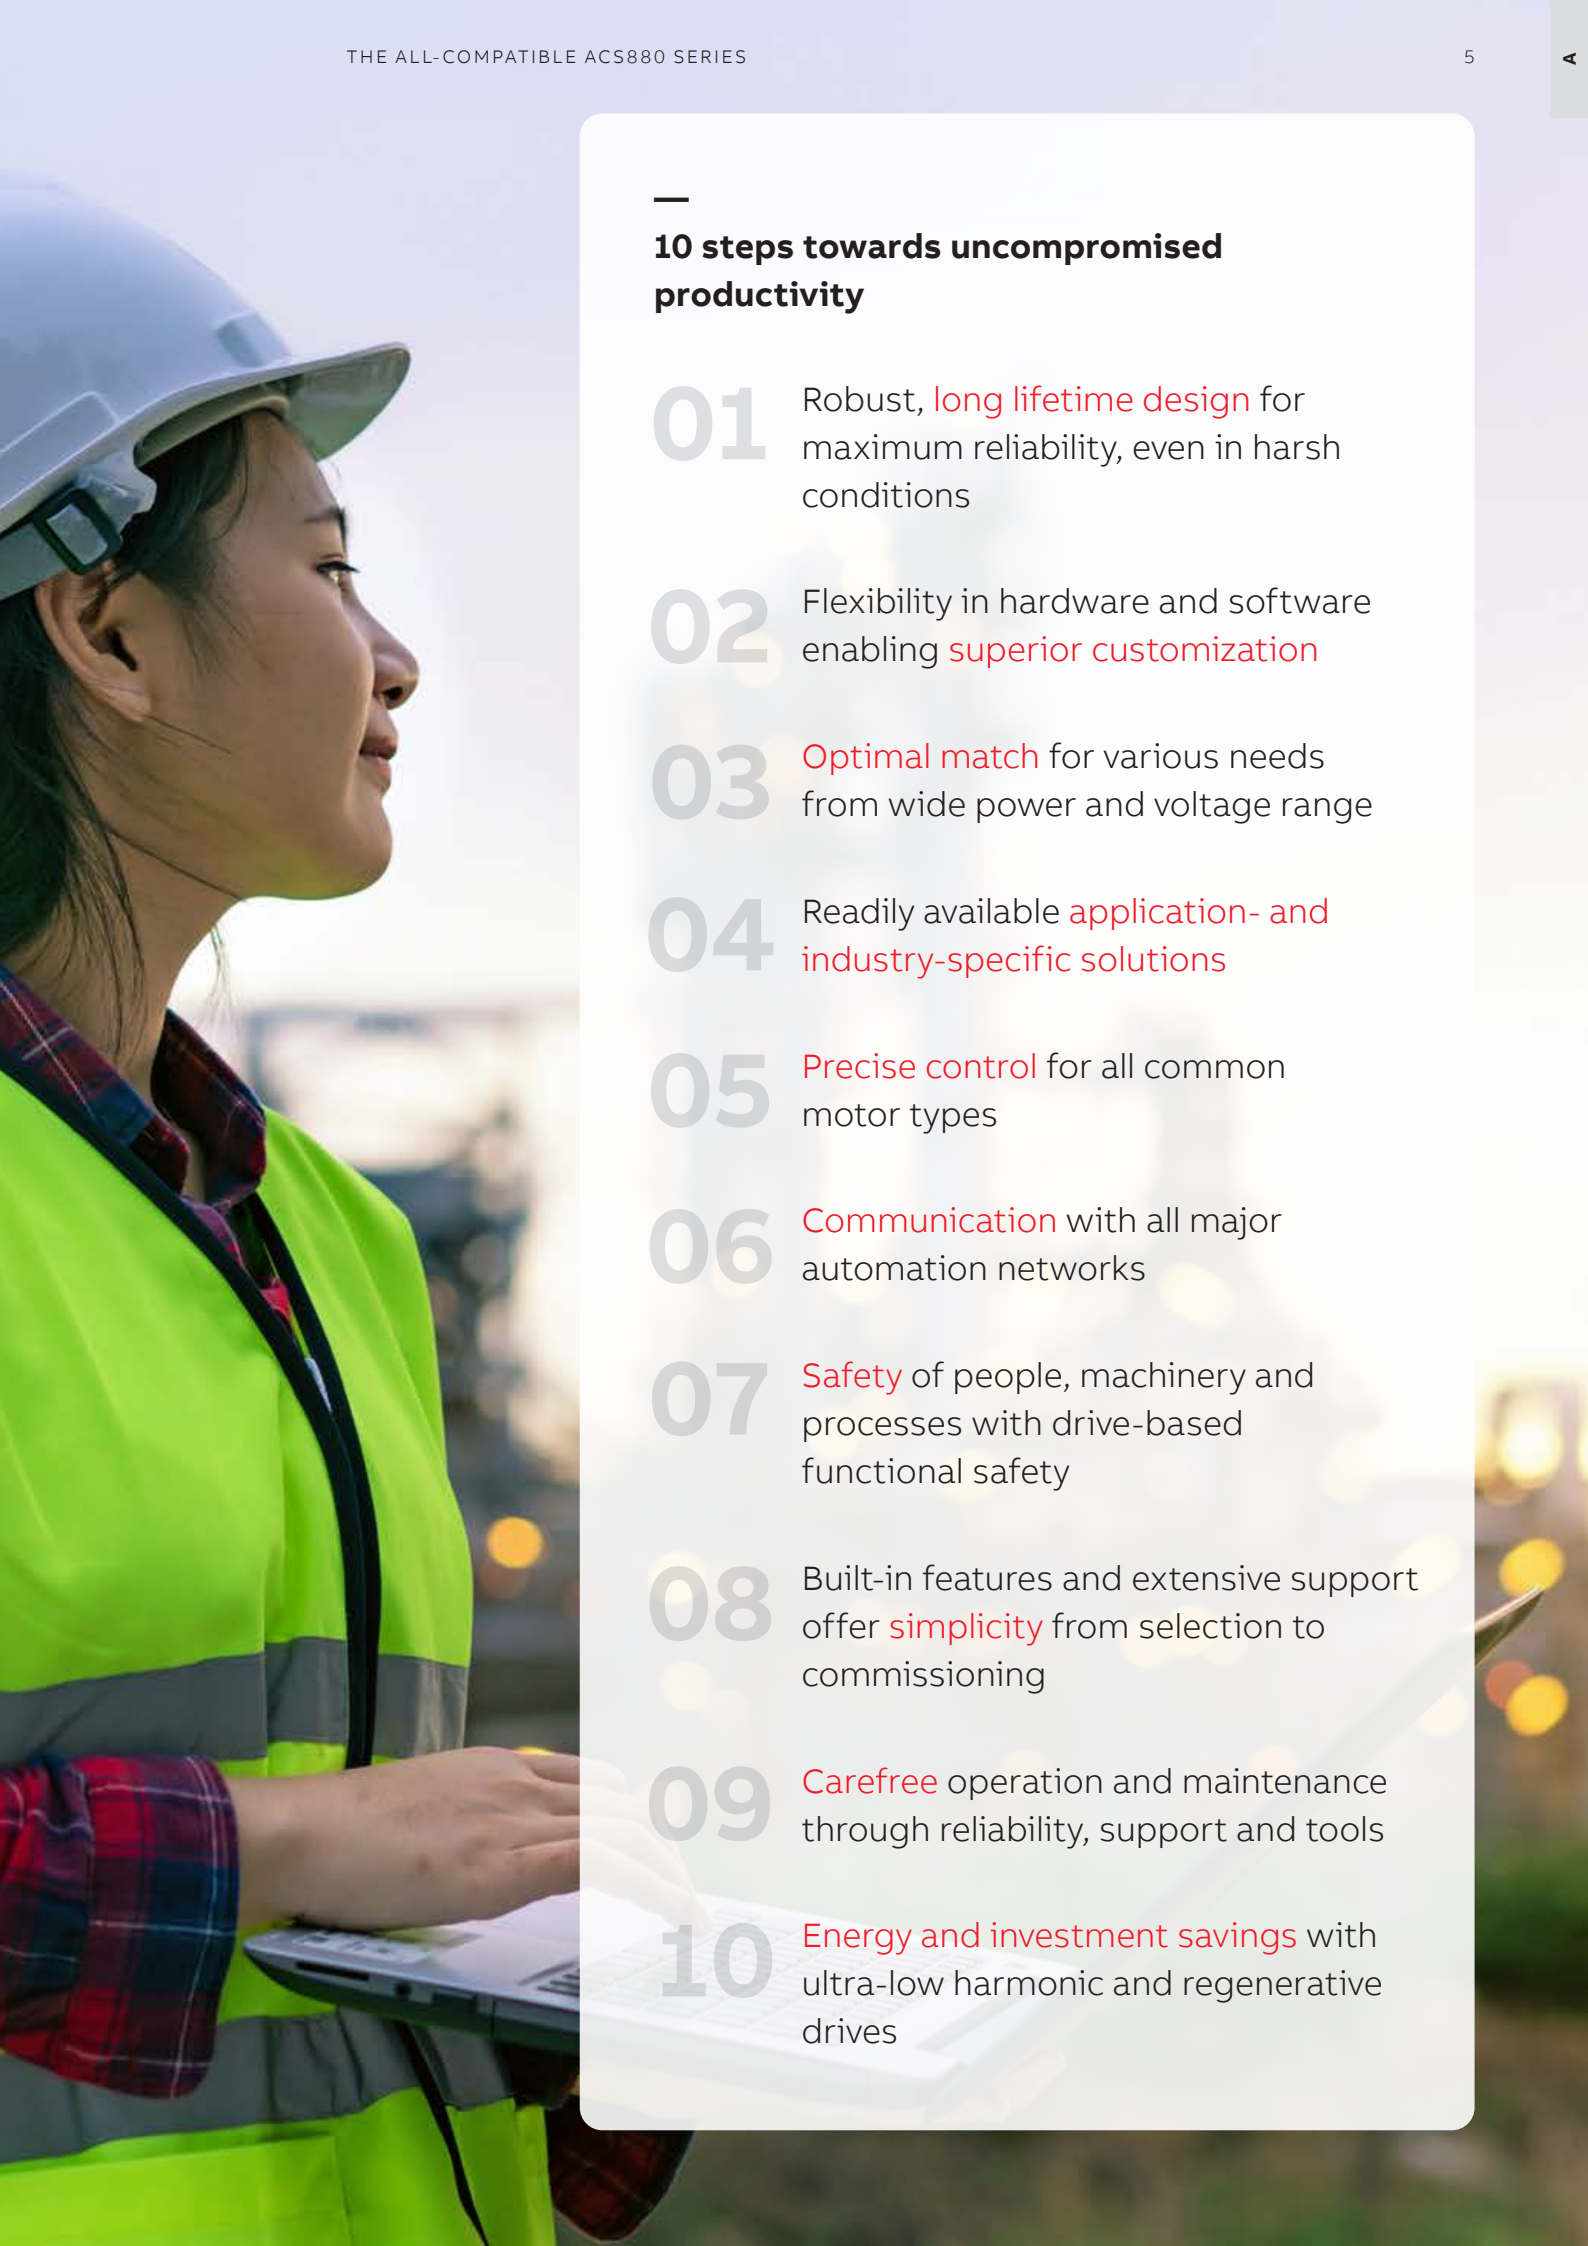
High quality

Reliability and consistent high quality
ACS880 drives are designed for customers who value high quality and robustness in their applications. They have features such as coated boards, nickel plated busbars as standard and high enclosure and high enclosure classes, making ACS880 suitable for harsh conditions Additionally, every ACS880 drive is factory-tested at full load to ensure maximum reliability. The tests include performance and all protective functions.

High performance, safety and configurability
ACS880 offers the highest level of performance. The drives are equipped with ABB's signature direct torque control (DTC), which provides precise speed and torque control for all applications and supports virtually any type of motor.

The extensive ACS880 offering includes wall-mounted drives, drive modules and cabinet-built drives, as well as low harmonic and regenerative variants.

ACS880 has all the essential features built in, reducing the time required for engineering, installation and commissioning. A wide range of options is also available to optimize the drive for different requirements, including certified, integrated safety features.



10 steps towards uncompromised productivity

01 Robust, long lifetime design for maximum reliability, even in harsh conditions

02 Flexibility in hardware and software enabling superior customization

03 Optimal match for various needs from wide power and voltage range

04 Readily available application- and industry-specific solutions

05 Precise control for all common motor types

06 Communication with all major automation networks

07 Safety of people, machinery and processes with drive-based functional safety

08 Built-in features and extensive support offer simplicity from selection to commissioning

09 Carefree operation and maintenance through reliability, support and tools

10 Energy and investment savings with ultra-low harmonic and regenerative drives

Simplicity and compatibility for both wall and cabinet mounting with ACS880 single drives

Wall-mounted and cabinet-built stand-alone drives for single motor applications in a compact and ready-to-use unit. ACS880 drives are designed for customers who value high quality and robustness. They offer the highest level of performance for a wide range of industrial applications.

ACS880-07LC drive

Wall-mounted ACS880-01 IP21 drives, standard
Wall-mounted IP21 drives are available in a power and voltage range from 0.55 to 250 kW and from 230 to 690 V. ACS880-01 has all the necessary parts, including an EMC filter, a reactor for harmonics mitigation and even a braking chopper *) built into the drive, and therefore offers a compact and cost-effective solution for cabinet-free installation.

*) Option in most of the frame sizes.

—
01

Wall-mounted ACS880-01 IP55 drives, +B056
The IP55 drive is designed for applications with exposure to dust, moisture and other harsh environments. The IP55 drives can usually be installed next to the motor instead of installation in an electrical room. They have almost the same dimensions as the IP21 drives, resulting in a very compact, cost-effective and robust package.
The power and voltage ranges of the IP55 and IP21 drives are identical.

—
02

Wall-mounted ACS880-11 and cabinet-built ACS880-17 regenerative drives
ACS880-11/17 is a compact and complete regenerative drive solution with everything you need for regenerative operation in cyclic or continuous braking applications. With regenerative functionality, the braking energy of the motor is returned to the drive and distributed to the supply network so that it can be utilized by other equipment.

ACS880 regenerative drives are also ultra-low harmonic drives, and they therefore include all the benefits of ABB ULH drives. The ACS880 regenerative single drives are available in a power and voltage range from 2.2 to 3200 kW and from 400 to 690 V.

—
03

— 04

Wall-mounted ACS880-31 and cabinet-built ACS880-37 ultra-low harmonic drives
ACS880-11/17 ultra-low harmonic drives are completely integrated, almost harmonic-free drives that are easy to install and use. No additional filters or special transformers are needed. This compact, cost-effective solution meets the strictest harmonic recommendations.

ACS880 ultra-low harmonic single drives are available in a power and voltage range from 2.2 to 3200 kW and from 400 to 690 V.

— 05

ACS880-07 cabinet-built drives, IP22, IP42 (+B054) and IP54 (+B055)
Cabinet-built drives are available with IP22 protection class as standard and IP42 and IP54 as options. The drives have a unique cooling arrangement even for harsh environments and a global cabinet design with a high quality standard. The power range is from 45 kW to 2800 kW, and the voltage range is 400–690 V.

— 06

ACS880-07LC, -07CLC, -17LC and -37LC liquid-cooled drives, IP42 and IP54 (+B055)
The compact and robust liquid-cooled cabinet drives are an ultimate solution for various applications where space savings, silent operation or durability in harsh environments is a must.

Single drives with a diode supply unit consist of extremely compact diode supply and inverter units with parallel connected modules. The small footprint enables a significant space and weight reduction.

ACS880-07CLC has an extremely compact design that focuses on marine use. It is available in 6-, 12- or 24-pulse diode solutions.

Readily available application- and industry-specific solutions

Expertise in tailored application control by working closely with customers

Cranes (EOT cranes), +N5050
- Mechanical brake control
- Slow down and end limit logic
- Antisway
- Hoist speed optimization
- Shaft synchro

Tower cranes, +N5650
- Slew control
- Mechanical brake control
- Mobile access via Bluetooth

Winches, +N5100
- Mooring
- Anchor control
- Accurate open-loop speed & torque control
- Winch interface for multiple control stands

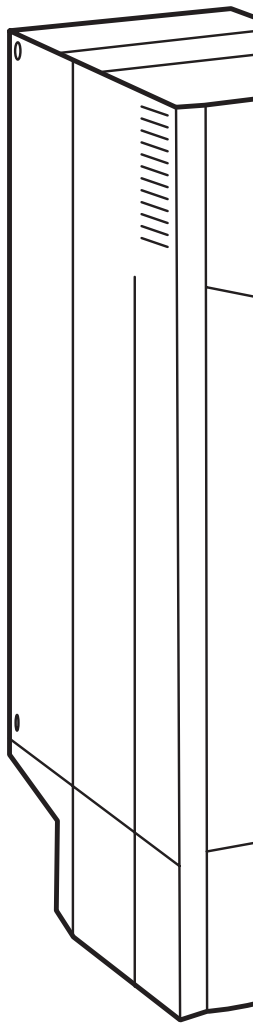
Winders, +N5000
- Roll diameter calculation
- Tension control
- Dancer and load cell control
- Inertia and friction compensation

Artificial oil lifting, ESP, +N5600
- Submersible motor control (induction and PM motors)
- Motor temperature minimization
- Backspin speed observer
- Rocking start
- Flow calculation

Artificial oil lifting, PCP +N5200
- Backspin control
- Automatic pump speed control
- Induction and PM motor control
- Protections for pump mechanics

Artificial oil lifting, rod pump +N5250
- Optimization of the pump speed
- Protections for pump mechanics
- Pump and well identification run

Tunnel ventilation (override control), +N5450
- Override of protections in and emergency situation
- Built-in PID control
- Energy optimizer for maximum motor efficiency



By working closely with customers over many years, ABB has developed application control programs and specific software features for specific applications and industries. This results in programs and features that include lessons learned from many customers, and that are designed to give you the flexibly to adapt the programs to your specific needs.

Advantages:
- Enhanced application usability
- Lower energy consumption
- Increased safety
- Reduced need for PLCs
- Protected machinery
- Optimized application productivity
- Optimized time usage and lower operating costs

Anti-cavitation, +N5900
- Extends the pump lifetime and secures the process
- Detects cavitation and ensures optimal pump speed to remove it

Position control, +N5700
- Ready-made motion control functions
- IEC 61131 programming with PLCopen motion blocks
- Synchronized drive-to-drive link

Textile (spinning), +N5500
- Wobbulation function
- Manual / auto off function
- Production history

Test bench, +N5300
- Fast communication
- High torque accuracy and linearity
- Acceleration damping
- Minimized motor noise

Centrifuge, decanter, +N5150
- Accurate speed and torque control, even without an encoder
- Speed difference control of scroll drives for decanters

Cooling tower, +N5350
- Support for slow, high-torque cooling tower motors
- Trickle current to keep the motor warm and dry, preventing condensation
- Anti-windmill function

High-speed control, +N7500
- Application-specific option for high-speed applications
- Optimized performance in a compact frame size
- Pre-sales support with drive type and sine filter recommendations

Chemical industry
- Direct torque control with sine filters
- Nine-year maintenance interval
- Functionality that conforms with NAMUR requirements

Explosive atmospheres
- Type approval with ABB Ex motors
- ATEX-approved Safe Torque Off, STO (+Q971) and thermistorprotection module (+L537)

Marine
- Type approval from various key classification bodies (+C132)
- Product certification process (+C20X)
- 440 V for basic marine applications

As part of ABB's sustainability strategy, the company will provide Environmental Product Declarations for relevant products, contributing to transparent and environmentally conscious business practices.

Environmental Product Declarations (EPDs) are standardized, third party verified, documents that provide information about the environmental performance of a product throughout its life cycle. They are based on Life Cycle Assessment (LCA) data and provide information on a range of environmental impacts such as carbon footprint, energy consumption, and resource use. EPDs are part of ABB's commitment to transparency and environmental sustainability.

ABB Drives EPDs include:

1. Raw materials extraction and processing:
   Information about the materials used in the product.
2. Manufacturing process:
   Details about the manufacturing process, energy consumption, and emissions during production.
3. Transportation:
   Information on the transportation of raw materials to the manufacturing site, and the transportation of the finished product to the end-user.
4. Installation:
   Environmental impacts associated with the installation process, including energy use and emissions.
5. Use phase:
   Energy consumption during the operation of the frequency converter based on efficiency its rating.
6. Maintenance:
   Information about the environmental impact of maintaining and servicing the frequency converter during its operational life.
7. End of life:
   Details about the recyclability of the product and the environmental impact of its disposal.

Environmental impact categories:
EPDs include information on a range of environmental impact categories, such as global warming potential, ozone depletion, acidification, eutrophication, and others.

Declaration of Global Warming Potential (GWP):
Information about the product's contribution to climate change, expressed in terms of carbon dioxide equivalent (CO_2-eq).

ABB Group EPDs follow the ISO 14025 standard.

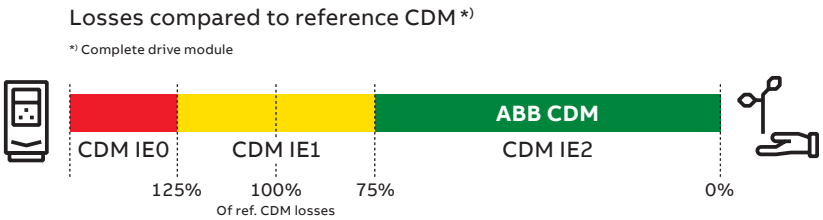
The ABB EPD's can be found here:
Environmental Product Declarations – ABB Group (global.abb)

ABB AC drives comply with the EU Ecodesign requirements

The Ecodesign regulation (EU) 2019/1781 is the legislative framework that sets minimum energy efficiency requirements for low voltage induction motors and variable speed drives. AC drives and power drive systems are classified according to their power losses. From July 2021, the minimum requirement for non-regenerative AC drives in EU is IE2.

ABB's AC drives (micro and machinery, general purpose, industrial and industry-specific drives) comply with the strictest requirements of the standard for energy efficiency and are classified as IE2.

Energy efficiency classes for a Complete Drive Module (CDM)



Markings on the ABB LV AC drives

Unique identifier QR code for Ecodesign information

IE class and % loss of rated apparent power 50 Hz, 400 V

IE2 (90;100) 2.3 %

Unique QR codes are located on the rating plate and/or the front of the drive.

ABB EcoDesign web-based tool

- Calculates absolute and relative losses and efficiency data at standard and user-defined operating points according to EU regulation 2019/1781 for complete drive module (CDM), LV motors with VSD supply, and power drive system (PDS)
- Losses and efficiency data at operating points in graphical and table format
- Printable efficiency report with possibility to customize title and additional details
- Report can be converted to PDF or CSV format and shared via email

The regulation was implemented in two steps:

Step 1: July 1, 2021

- Power range: from 0.12 to 1000 kW
- 3-phase LV AC drives with diode rectifier
- Drive manufacturers must declare power losses as a percentage of the rated apparent output power at 8 different operating points, as well as standby losses. The international IE level is given at the nominal point. Drives fulfilling the requirements are CE-marked.

Out of scope of the regulation:

- All drives without CE marking
- The following low voltage AC drives: regenerative drives, low-harmonic drives (THD < 10%), multiple AC-output drives and single-phase drives.
- Medium-voltage drives, DC drives and traction drives
- Drive cabinets that already have conformity-assessed modules

Step 2: July 1, 2023

No changes for AC drives

For more information, see: ecodesign.drivesmotors.abb.com

Built-in functional safety. See pages 88–89.	
For Safe Torque Off (STO) and safety functions modules	EN/IEC 61800-5-2: SIL3, IEC 61508: SIL3, IEC 61511: SIL3, EN/IEC 62061: SIL3 EN ISO 13849-1: PL e - TÜV Nord certified
Safety over fieldbus	PROFIsafe over PROFINET and CIP Safety™ over Ethernet IP, certified.

*) C = Chemically active substances. S = Mechanically active substances.
**) G3/GX up to 2300 Å/30d corrosivity

1) Operation above 120 Hz may require type-specific derating. For higher output frequencies, please contact your local ABB office. Output filters may limit the output frequency. See product-specific hardware manual for details.
2) Safe disconnection function (+Q971), Thermistor protection function (+L537+Q971), FPTC-02, PTC/PT100 thermal motor protection for -07/17/37/-07LC/17LC/37LC (+L513/L514+Q971)
3) For available certificates, see https://new.abb.com/drives/functional-safety
4) EAC directives: TR CU 020/2011 (EMC directive); TR CU 004/2011 (Low voltage directive)
5) See product-specific hardware manual for detailed derating rules
6) Derating reduced by lower than 40 °C ambient temperature
7) Not applicable for -07CLC
8) In operation, UL/CSA panel shop standards that ACS880-x7 air & LC comply with, only allow ambient temperature of 0…40 °C

How to select a drive

The right drive is extremely easy to select. The following instructions show you how to order the right drive for your application.

Start by identifying your supply voltage and select the related rating table. Or use ABB's DriveSize dimensioning tool.

Select your drive's order code (drive type) from the rating table based on the load current, or, if it is unknown, select the drive based on your motor's power and current ratings.

Choose your options and add the option codes to the drive's order code. Remember to use a "+" sing before each option code.

DIGITAL SOLUTIONS AND CONNECTIVITY FOR DRIVES 79

+ Door mounting and panel bus

Improve safety and leverage the full potential of the ACS880 control panel options with a door mounting kit and panel bus adapter.

Door mounting fosters easy operation and safety. It enables you to operate the drive without opening the cabinet door, saving time and keeping all the electronics behind the closed door.

Up to 32 drives can be connected to one control panel for even easier and quicker operation. When using the panel bus, you need only one assistant control panel.

Cabinet door

Control panel mounting platform
The mounting platform for the drive's control panel.

Bluetooth Assistant control panel
The Bluetooth control panel comes as standard with ACS880 drives. Also an control panel without wireless connection can be used.

Panel bus
Panel bus connectors come as standard in wall-mounted ACS880-01, -11 and -31 drives. With other ACS880 drives, the panel bus can be implemented by using a FDPI-02 interface.

Cabinet, outside

Cabinet, inside

Control panel options
Bluetooth Assistant control panel ACS-AP-W is included as standard in the delivery. ACS-AP-W (+J400) can be replaced by +J options below.

Option code	Ordering code for loose item	Description	Type
+J400	–	No control panel	–
–	3AXD10000021965	Bluetooth Assistant control panel. Included as standard	ACS-AP-W
+J625	3AUA0000088311	Industrial assistant control panel without Bluetooth connection	ACS-AP-I
+J410	3AUA0000108878	Control panel mounting platform, flush mounted, IP54/UL Type 12 (does not include control panel)	DPMP-01
+J413	3AXD50000009374	Control panel mounting platform, surface mounted, IP65/UL Type 12 (does not include control panel)	DPMP-02
–	3AXD50000217717	Control panel mounting platform for outdoor and harsh environments, IP66, UV resistance, IK07 impact protection rating (does not include control panel)	DPMP-04

Compact package for simple installation
ACS880-01 comes in one compact package for easy installation and commissioning. The drive supports wall mounting as standard and cabinet mounting as an option. The drive offering includes enclosure classes up to IP55, making it suitable for most environments and installations.

ACS880-01 drives have all the essential features built-in. These features include a choke for harmonic filtering as standard, as well as options like a brake chopper, EMC filter and communication protocol adapter, functional safety, and I/O extension modules. The extensive range of options also includes external output filters and brake resistors.

ACS880-01 is also available with marine type approval from various key classification bodies.

Wall-mounted ACS880-01 drives
- Power ratings: 0.55 to 250 kW
- Enclosure classes: IP20 for cabinet mounting, IP21 (as standard) for wall mounting and IP55 for dusty and wet environments

Main options:
- C2 and C3 EMC filters, see page 73
- Brake chopper (as standard in frames R1 to R4), see page 82
- Brake resistor, see page 82
- Marine type approval from various key classification bodies
- I/O extension modules, see page 63
- Communication protocol adapters, see page 63
- Speed feedback interfaces, see page 65
- Functional safety modules, see page 70
- Remote monitoring tool, see page 66
- Application-specific software, see page 20
- Du/dt filters, see page 90
- Sine filters, see page 76
- Flange (push-through) mounting

The drives have an extensive selection of built-in features and options. See page 100.

Highlights
- Wide power range supporting wall mounting, 0.55 to 250 kW
- Enclosure classes up to IP55
- Compact, single package with all the essential features built in
- Easy installation for different environments
- Robust and reliable design
- Optional marine type approved version

*) Heat dissipation value is a reference for cabinet thermal design. According to Ecodesign regulations.

Nominal ratings	
I_N	Rated current available continuously without overloadability at 40 °C.
P_N	Typical motor power in no-overload use.
Maximum output current	
I_{max}	Maximum output current. Available for 10 seconds at start, then as long as allowed by drive temperature.
Light overload use	
I_{Ld}	Continuous current allowing 110% I_{Ld} for 1 minute every 5 minutes at 40 °C.
P_{Ld}	Typical motor power in light overload use.
Heavy-duty use	
I_{Hd}	Continuous current allowing 150% I_{Hd} for 1 minute every 5 minutes at 40 °C.
P_{Hd}	Typical motor power in heavy-duty use.

The ratings apply at 40 °C ambient temperature. At higher temperatures (up to 55 °C), the derating is 1%/1 °C.

[1] 130% overload
[2] 125% overload
[3] For drives with enclosure class IP55, the ratings apply at 40 °C ambient temperature .
At higher temperatures, the derating is from 40 to 45 °C 1%/1 °C and 45 to 55 °C 2.5%/1 °C.
[4] For drives with enclosure class IP55, the ratings apply at 40 °C ambient temperature.
At higher temperatures, the derating is from 40 to 50 °C 1%/1 °C and 50 to 55 °C 2.5%/1 °C.

Our cabinet-built single drives are built to order, meeting your needs regardless of the technical challenges. The drive configuration includes a rectifier, DC link, inverter, fuses, line choke and a main switch, all built into a compact cabinet for easy assembly and commissioning.

ACS880-07 offers a wide variety of standardized configurations for different application requirements, from line contactors to preventing unexpected motor starts. If the application requires more, ABB's Order-Based Engineering services can add special features to the standard product, such as an additional cabinet for customer-specific devices.

Drives up to frame size R11 are based on a compact single module, including a rectifier and inverter. Larger drives consist of a separate rectifier and inverter modules, providing redundancy with parallel connected units. If one module needs to be disconnected, the drive can continue running at reduced power.

The robust design and enclosures up to IP54 make ACS880-07 suitable for even very harsh environments.

Cabinet-built ACS880-07 drives
- Power ratings: 45 to 2800 kW
- Enclosure classes IP22 (as standard), IP42 and IP54 for different environments, with option of air intake through the bottom of the cabinet and channeled air outlet on the top of the cabinet

Main options:
- Cabling solutions for bottom and top entry and exit
- Functional safety modules, see page 70
- I/O extension modules, see page 63
- Communication protocol adapters, see page 63
- Speed feedback interfaces, see page 65
- Brake option inside the module or cabinet, see page 82
- C2 and C3 EMC filters, see page 73
- Du/dt and common mode filter options for motor protection, see page 90
- Marine construction option
- Cabinet light and heater option

The drives have an extensive selection of built-in features and options. See page 100.

Highlights
- Compact package for easy assembly and commissioning
- Available as an engineered, customer-specific solution
- All essential features built in
- Robust design verified by various standards

[4)] = 144% overload

Nominal ratings	
I_N	Rated current available continuously without overloadability at 40 °C.
P_N	Typical motor power in no-overload use.
Maximum output current	
I_{max}	Maximum output current. Available for 10 seconds at start, then as long as allowed by drive temperature.
Light overload use	
I_{Ld}	Continuous current allowing 110% I_{Ld} for 1 minute every 5 minutes at 40 °C.
P_{Ld}	Typical motor power in light overload use.
Heavy-duty use	
I_{Hd}	Continuous current allowing 150% I_{Hd} for 1 minute every 5 minutes at 40 °C.
P_{Hd}	Typical motor power in heavy-duty use.

The ratings apply at 40 °C ambient temperature. At higher temperatures (up to 50 °C), the derating is 1%/1 °C.
Operation above 150 Hz may require type specific derating.

Regenerative drives
ACS880-11 and ACS880-17

Energy savings
ACS880-11/17 regenerative drives are a compact and complete regenerative drive solution, with everything you need for regenerative operation in cyclic or continuous braking applications. Such applications include cranes, elevators, centrifuges, downhill conveyers and test benches. With regenerative functionality, the braking energy of the motor is returned to the drive and distributed to the supply network so that it can be utilized by other equipment. Compared to mechanical or resistor braking, where braking energy is wasted as heat, regenerative drive operation offers significant energy consumption and cooling savings.

ACS880 regenerative drives achieve a unity power factor, indicating that electrical energy is being used efficiently. It is possible to increase system efficiency even further with common DC solutions by sharing braking energy between multiple drives through a DC link.

Possibility to regenerate 100% of power continuously

Minimized downtime
The ACS880 regenerative drive offers immunity to network disturbances. The drive will not interrupt the process or affect its quality in unstable supply network conditions. The drive's active supply unit can boost the output voltage to enable full motor voltage, even when the supply voltage is below nominal. This ensures reliable operation in weak networks. This voltage boost capability can also be utilized to overcome voltage drops caused by long supply or motor cables.

Optimized cost and space
Everything needed for regenerative operation, such as an active supply unit and a low harmonic line filter are integrated into the drive, and no external braking devices are needed.

Advantages:
- Quick, easy drive installation
- Small installation footprint
- No need to add cooling to handle the heat generated by mechanical or resistor braking
- Simplified wiring
- Fewer spare parts needed

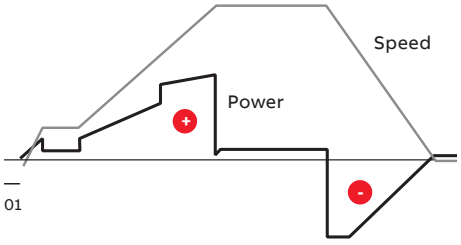
The "all inside" design helps cut engineering and assembly time, as well as reduce equipment costs and the risk of errors.

The drive's voltage boost capability can be an advantage in motor dimensioning. With a higher motor voltage, the same power is achieved with less current, which improves motor efficiency and may allow a smaller motor to be used.

The drive offers a possibility of network power factor correction to compensate for the low power factors of equipment connected to the same network. It reduces the need for additional power factor correction equipment such as filters and large capacitor banks. It can also help avoid penalty charges from electrical utilities for poor power factors.

Maximized motor performance and efficiency
The drive can provide full motor voltage, even if the supply voltage fluctuates. Regeneration can occur for as long as necessary and as often as needed.

The drive features direct torque control (DTC) as standard, making it suitable for very demanding applications as well. DTC provides precise speed and torque control for maximum motor performance and motor efficiency.



01

Clean supply network
The drive produces exceptionally low harmonic content and exceeds the requirements of harmonic guidance/standards such as IEEE 519, IEC61000-3-2, IEC61000-3-12, IEC61000-3-4 and G5/4. Compared to a conventional drive, the harmonic content is reduced by up to 97%. The total harmonic current distortion is typically <3% in a nominal situation and an undistorted network.

01
Speed and power curves in cyclic operation

Wall-mounted regenerative drives, ACS880-11
- Power ratings: 2.2 to 110 kW
- Enclosure classes: IP20 for cabinet mounting, IP21 (as standard) for wall mounting and IP55 for dusty and wet environments

Main options:
- Flange (push-through) mounting
- C2 and C3 EMC filters, see page 73
- I/O extension modules, see page 63
- Communication protocol adapters, see page 63
- Speed feedback interfaces, see page 65
- Functional safety modules, see page 70
- Remote monitoring tool, see page 66
- Application-specific software, see page 20
- Du/dt filters, see page 90
- Sine filters, see page 76

Cabinet-built regenerative drives, ACS880-17
- Power ratings: 45 to 3200 kW
- Enclosure classes: IP22 (as standard), IP42 and IP54 for different environments, with option of air intake through bottom of the cabinet and channeled air outlet on the top of the cabinet

Main options:
- EMC filters, see page 65 (as standard for nxR8i)
- Cabling solutions for bottom and top entry and exit
- Functional safety modules, see page 70
- I/O extension modules, see page 63
- Communication protocol adapters, see page 63
- Speed feedback interfaces, see page 65
- Du/dt and common mode filter options for motor protection, see page 90
- Marine construction option
- Cabinet light and heater option

The drives have an extensive selection of built-in features and options. See page 100.

Highlights
- Everything for regenerative operation in one compact package. Designed for easy installation
- Possibility to regenerate 100% of the power continuously
- The total harmonic current distortion is typically <3% in a nominal situation and an undistorted network
- Significant energy savings compared to other braking methods
- Reduced cost of ownership
- Unity power factor. Possibility also of network power factor correction
- Stable output voltage in all load conditions, even with fluctuating supply voltage
- DC voltage boost to compensate for a voltage drop caused by an output filter or long motor cables, and to ensure full motor supply voltage
- Increased system efficiency with common DC solutions

Nominal ratings	
I_N	Rated current available continuously without overloadability at 40 °C.
P_N	Typical motor power in no-overload use.
Maximum output current	
I_{max}	Maximum output current. Available for 10 seconds at start, then as long as allowed by drive temperature.
Light overload use	
I_{Ld}	Continuous current allowing 110% I_{Ld} for 1 minute every 5 minutes at 40 °C.
P_{Ld}	Typical motor power in light overload use.
Heavy-duty use	
I_{Hd}	Continuous current allowing 150% I_{Hd} for 1 minute every 5 minutes at 40 °C.
P_{Hd}	Typical motor power in heavy-duty use.

The ratings apply at 40 °C ambient temperature.
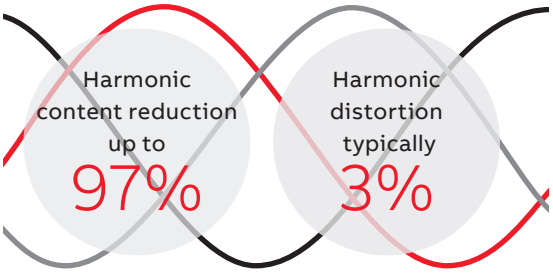
At higher temperatures (up to 50 °C), the derating is 1%/1 °C.
Operation above 150 Hz may require type-specific derating.

G

Ultra-low harmonic drives
ACS880-31 and ACS880-37

Harmonic distortions can disturb or even damage sensitive equipment connected in the same environment. Harmonics also cause additional losses in the network.

Clean supply network
The drive produces exceptionally low harmonic content and exceeds the requirements of harmonic guidance/standards such as IEEE 519, IEC61000-3-2, IEC61000-3-12, IEC61000-3-4 and G5/4. Compared to a conventional drive, the harmonic content is reduced by up to 97%.
The total harmonic current distortion is typically <3% in a nominal situation and an undistorted network. A common DC solution introduces a cost-efficient way of keeping the supply network clean in an installation of multiple drives.



Keeps the network clean

Minimized downtime
The ACS880 ultra-low harmonic drive offers immunity to network disturbances. The drive will not interrupt the process or affect its quality in unstable supply network conditions. The drive's active supply unit can boost the output voltage to enable full motor voltage, even when the supply voltage is below nominal. This ensures reliable operation in weak networks. This voltage boost capability can also be utilized to overcome voltage drops caused by long supply or motor cables. The possibility to stabilize the output voltage of the drive is an advantage compared to alternative low harmonic solutions where voltage cannot be boosted.

Optimized cost and space
The compact drive features built in harmonics mitigation. This includes an active supply unit and a low harmonic line filter. As there is no need for external filters, multi-pulse arrangements or special transformers, the simple installation offers significant space, time and cost savings.

As there is less risk of overheating with lower harmonic currents, there is no need to over-dimension equipment such as transformers and cables. The drive's voltage boost capability can be an advantage in motor dimensioning. With a higher motor voltage, the same power is achieved with a lower current, which improves motor efficiency and may allow a smaller motor to be used.

Maximized motor performance and efficiency
The drive can provide full motor voltage, even if the supply voltage fluctuates. It features direct torque control (DTC) as standard, making it suitable for very demanding applications as well. DTC provides precise speed and torque control for maximum motor performance and motor efficiency.

Reduces the total cost of ownership

Efficient energy utilization
The ACS880 ultra-low harmonic drives achieve a unity power factor, indicating that electrical energy is being used efficiently.

The drive offers the possibility of network power factor correction to compensate for the low power factors of equipment connected to the same network. It can help avoid penalty charges set by electrical utilities for poor power factors.

Lower harmonics and full motor voltage at all times mean reduced system losses and better overall system efficiency.

For more information, visit http://new.abb.com/drives/harmonics.

Wall-mounted ultra-low harmonic drives, ACS880-31

- Power ratings: 2.2 to 110 kW
- Enclosure classes: IP20 for cabinet mounting, IP21 (as standard) for wall mounting and IP55 for dusty and wet environments

Main options:

- Flange mounting
- C2 and C3 EMC filters, see page 73
- I/O extension modules, see page 63
- Communication protocol adapters, see page 58
- Speed feedback interfaces, see page 65
- Functional safety modules, see page 70
- Remote monitoring tool, see page 66
- Application-specific software, see page 20
- Du/dt filters, see page 90
- Sine filters, see page 76

Cabinet-built ultra-low harmonic drives, ACS880-37

- Power ratings: 45 to 3200 kW
- Enclosure classes: IP22 (as standard), IP42 and IP54 for different environments, with option of air intake through bottom of the cabinet and channeled air outlet on the top of the cabinet

Main options:

- EMC filters, see page 65 (as standard for nxR8i)
- Cabling solutions for bottom and top entry and exit
- Functional safety modules, see page 70
- I/O extension modules, see page 63
- Communication protocol adapters, see page 63
- Speed feedback interfaces, see page 65
- Du/dt and common mode filter options for motor protection, see page 90
- Marine construction option
- Cabinet light and heater option

The drives have an extensive selection of built-in features and options. See page 100.

Highlights

- The total harmonic current distortion is typically <3% in a nominal situation and undistorted network. Low harmonic content also in partial loads
- “All inside” design: no need for external filters, multi-pulse arrangements or special transformers
- Simple and cost-effective installation
- Unity power factor. Possibility of network power factor correction
- Small installation footprint
- Output voltage stabilization secures operation in weak networks
- DC voltage boost to compensate for a voltage drop caused by an output filter or long motor cables, and to ensure full motor supply voltage
- Increased system efficiency with lower component losses due to very low level of harmonics

Nominal ratings	
I_N	Rated current available continuously without overloadability at 40 °C.
P_N	Typical motor power in no-overload use.
Maximum output current	
I_{max}	Maximum output current. Available for 10 seconds at start, then as long as allowed by drive temperature.
Light overload use	
I_{Ld}	Continuous current allowing 110% I_{Ld} for 1 minute every 5 minutes at 40 °C.
P_{Ld}	Typical motor power in light overload use.
Heavy-duty use	
I_{Hd}	Continuous current allowing 150% I_{Hd} for 1 minute every 5 minutes at 40 °C.
P_{Hd}	Typical motor power in heavy-duty use.

The ratings apply at 40 °C ambient temperature.
At higher temperatures (up to 50 °C), the derating is 1%/1 °C. Operation above 150 Hz may require type-specific derating.
[1)] Values to be confirmed upon full sales release of the product. Please contact ABB for further information.

Liquid-cooled drives
ACS880-07LC, ACS880-07CLC, ACS880-17LC, ACS880-37LC

The compact and robust liquid-cooled cabinet drives are an ultimate solution for various applications where space savings, silent operation or durability in harsh environments is a must.

The single drives with diode supply unit consists of extremely compact diode supply and inverter units with parallel connected modules. The small footprint enables significant space and weight reduction.

In addition to the single drives with diode supply units, the extensive ACS880 liquid-cooled offering includes low harmonic and regenerative variants.

Built-in redundancy through parallel connected modules enables higher drive availability and greater process uptime. If one of the modules is not operating or is being maintained, the drive will continue to operate at partial load.

Advanced liquid cooling and optimal design
Direct liquid cooling offers easy heat transfer without air filtering problems. As the coolant takes care of 98% of the heat losses, no additional filtered air cooling is needed. This increases the total efficiency of the drive installation.

For harsh environmental conditions

Robust solution for different environments
The totally enclosed cabinet structure makes the ACS880 liquid-cooled drives perfect for harsh environmental conditions.

The offering fulfills marine and offshore requirements, and the drives have marine type approvals from various key classification bodies.

As the direct liquid cooling enables silent operation, the ACS880 liquid-cooled drives are suitable for applications where noise levels are an important environmental factor.

Robust, reliable and compact

Simple and cost-effective installation
Highly efficient liquid cooling removes the need for air conditioning in the installation rooms, bringing installation and operating costs down. As there is no need for additional air-conditioning devices or air ducts, the installation is significantly simplified.

The used coolant type is Antifrogen® L, by Clariant International Ltd, a cooling liquid with glycol and inhibitor. It is a ready-made, commercially available mix, which enables easy commissioning and maximized process uptime.

Liquid-cooled ACS880-07LC and ACS880-07CLC drives
- Power ratings: 250 to 6000 kW
- Enclosure classes: IP42 (as standard) and IP54

Main options:
- Optional liquid cooling unit (LCU) for single, redundant and tandem pump versions
- I/O extension modules, see page 62
- Communication protocol adapters, see page 62
- Emergency stop category 0 with opening main contactor/breaker
- Earth fault monitoring, unearthed mains (IT)

ACS880-07LC:
- Designed for industrial use
- 6- or 12-pulse solution
- Internal charging circuit for the drive

ACS880-07CLC:
- Extremely compact design focused on marine use
- 6-, 12- or 24-pulse solution

Liquid-cooled regenerative ACS880-17LC and ultra-low harmonic ACS880-37LC drives
- Power ratings: 250 to 6000 kW
- Enclosure classes: IP42 (as standard) and IP54

Main options:
- Optional liquid cooling unit (LCU) for single, redundant and tandem pump versions
- Cabling solutions for bottom and top entry and exit
- I/O extension modules, see page 63
- Communication protocol adapters, see page 63

For more information about regenerative functionality, see page 36, and on harmonics, see page 42.

The drives have an extensive selection of built-in features and options. See page 104.

Highlights
- Advanced liquid cooling which reduces the need for air cooling in installation rooms
- High power density with compact and robust design
- Commercially available coolant mix, Antifrogen L
- Redundancy through parallel connected modules prevents unwanted process interruptions
- Low harmonic and regenerative variants
- Silent operation
- Suitable for harsh environments
- Marine approvals from various key classification bodies.

Nominal ratings	
I_N	Rated current available continuously without overloadability at 45 °C.
P_N	Typical motor power in no-overload use.
P_{max}	Maximum nominal cooling power.
Internal flow	Nominal coolant flow rate from the liquid cooling unit to the drive modules.
External flow	Nominal coolant flow rate to the liquid cooling unit from an external cooling circuit.
Maximum output current	
I_{max}	Maximum output current. Available for 10 seconds at start, then as long as allowed by drive temperature.
Light overload use	
I_{Ld}	Continuous current allowing 110% I_{Ld} for 1 minute every 5 minutes at 45 °C.
P_{Ld}	Typical motor power in light overload use.
Heavy-duty use	
I_{Hd}	Continuous current allowing 150% I_{Hd} for 1 minute every 5 minutes at 45 °C.
P_{Hd}	Typical motor power in heavy-duty use.
Losses	
$P_{loss\ total}$	Power loss conducted to coolant and emitted to air.
$P_{loss\ coolant}$	Power loss conducted to coolant.
$P_{loss\ air}$	Power loss emitted to air (ambient room).
P_{drop}	Pressure loss in external cooling circuit.

The ratings apply at 45 °C ambient temperature. At higher temperatures (up to 55 °C), the derating is 1%/1 °C.
Operation above 150 Hz may require type-specific derating.

Standard interface and extensions for plug-in connectivity

—
01
Control unit ZCU
—
02
Example of a typical single drives input/output connection diagram. Variations may be possible. For further information, please see the ACS880 user manual.

ACS880 has a wide range of standard interfaces, including an extensive selection of I/O connections, Safe Torque Off (STO) and a galvanically isolated RS485 link that can be configured as either a Modbus RTU or a high-speed drive-to-drive link.

In addition, the drive control units (ZCU, BCU and UCU) have three option slots that can be used for extensions, including communication protocol adapters, input/output extension modules, feedback modules, and a safety functions module. For I/O extensions, see page 83.

01

Control connections	Description
2 analog inputs (XAI)	Current input: -20 to 20 mA, R_{in}: 100 ohm Voltage input: -10 to 10 V, R_{in} > 200 kohm Resolution: 11 bit + sign bit
2 analog outputs (XAO)	0 to 20 mA, R_{load} < 500 ohm Frequency range: 0 to 300 Hz Resolution: 11 bit + sign bit
6 digital inputs (XDI)	Input type: NPN/PNP (DI1 to DI5), NPN (DI6) DI6 (XDI:6) can alternatively be used as an input for a PTC thermistor.
Digital input interlock (DIIL)	Input type: NPN/PNP
2 digital inputs/outputs (XDIO)	As input: 24 V logic levels: “0” < 5 V, “1” > 15 V R_{in}: 2 kohm Filtering: 0.25 ms As output: Total output current from 24 V DC is limited to 200 mA Can be set as pulse train input and output
3 relay outputs (XRO1, XRO2, XRO3)	250 V AC/30 V DC, 2 A
Safe Torque Off (XSTO)	For the drive to start, both connections must be closed
Drive-to-drive link (XD2D)	Physical layer: EIA-485
Built-in Modbus	EIA-485
Assistant control panel/PC tool connection	Connector: RJ-45

31	NC	Faulted (-1)
32	COM	250 V AC/30 V DC
33	NO	2 A
XD24		**Digital interlock**
1	DIIL	Digital interlock
2	+24VD	+24 V DC 200 mA
3	DICOM	Digital input ground
4	+24VD	+24 V DC 200 mA
5	DIOGND	Digital input/output ground
J6		Ground selection switch
XDIO		**Digital input/outputs**
1	DIO1	Output: Ready
2	DIO2	Output: Running
XDI		Digital inputs
1	DI1	Stop (0)/Start (1)
2	DI2	Forward (0)/Reverse (1)
3	DI3	Reset
4	DI4	Acceleration and deceleration select
5	DI5	Constant speed 1 (1=On)
6	DI6	Not in use by default
XSTO		**Safe Torque Off**
1	OUT1	Safe Torque Off
2	SGND	
3	IN1	
4	IN2	
X12		**Safety functions module connection**
X13		**Control panel connection**
X205		**Memory unit connection**

K

EMC – electromagnetic compatibility

Each ACS880 model can be equipped with a built-in filter to reduce high-frequency emissions.

What is EMC?
EMC stands for electromagnetic compatibility. It is the ability of electrical/electronic equipment to operate without problems in an electromagnetic environment.

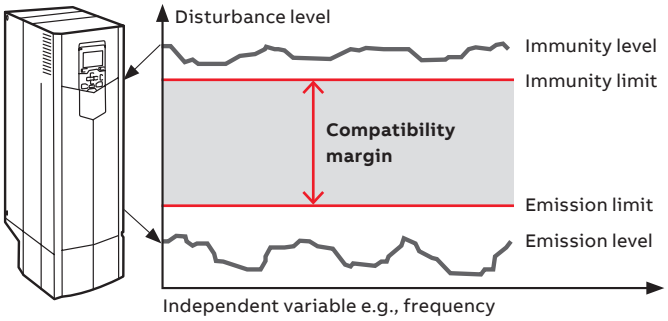
Likewise, the equipment must not disturb or interfere with any other product or system in its locality. This is a legal requirement for all equipment in service within the European Economic Area (EEA).

Installation environments
A power drive system (PDS) can can be connected to either industrial or public power distribution networks. The environment class depends on how the PDS is connected to the power supply.

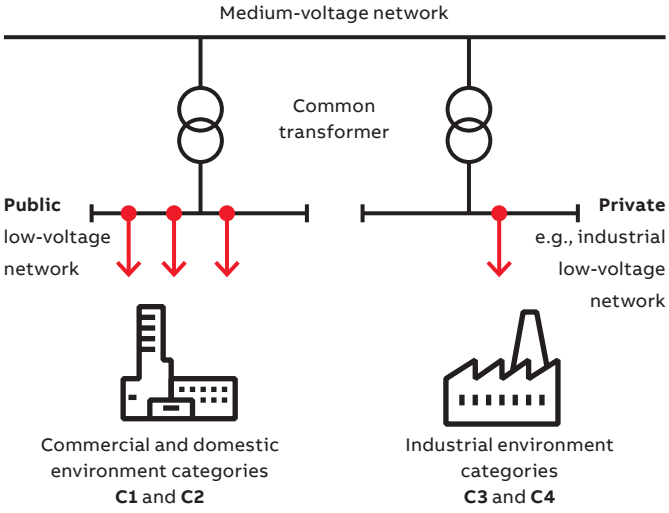
The **1st environment** includes domestic premises. It also includes establishments directly connected without an intermediate transformer to a low-voltage power supply network that supplies buildings used for domestic purposes.

The **2nd environment** includes all establishments directly connected to public low-voltage power supply networks.

Immunity and emission compatibility



Installation environments



The product standard EN 61800-3 divides PDSs into four categories according to the intended use

C1 – 1st environment
- Household appliances
- Usually plug connectable to any wall outlet
- Anyone can connect these to the network
- Examples: washing machines, TV sets, computers, microwave ovens, etc.

C2 – 1st environment
- Fixed household and public appliances
- Need to be installed or operated by a professional
- Examples: elevators, rooftop fans, residential booster pumps, gates and barriers, supermarket freezers, etc.

C3 – 2nd environment
- Professional equipment
- Needs to be installed or operated by a professional
- In some rare cases, may also be pluggable
- Examples: any equipment for industrial use only, such as conveyors, mixers, etc.

C4 – 2nd environment
- Professional equipment
- Needs to be fixed installation and operated by a professional
- Examples: paper machines, rolling mills, etc.

Comparison of EMC standards

EN 61800-3, product standard	EN 61800-3, product standard	EN 55011, product family standard for industrial, scientific and medical (ISM) equipment	EN 61000-6-4, generic emission standard for industrial environments	EN 61000-6-3, generic emission standard for residential, commercial and light industrial environments
Category C1	1st environment, unrestricted distribution	Group 1. Class B	Not applicable	Applicable
Category C2	1st environment, restricted distribution	Group 1. Class A	Applicable	Not applicable
Category C3	2nd environment, unrestricted distribution	Group 2. Class A	Not applicable	Not applicable
Category C4	2nd environment, restricted distribution	Not applicable	Not applicable	Not applicable

For potentially explosive atmosphere
ATEX-certified

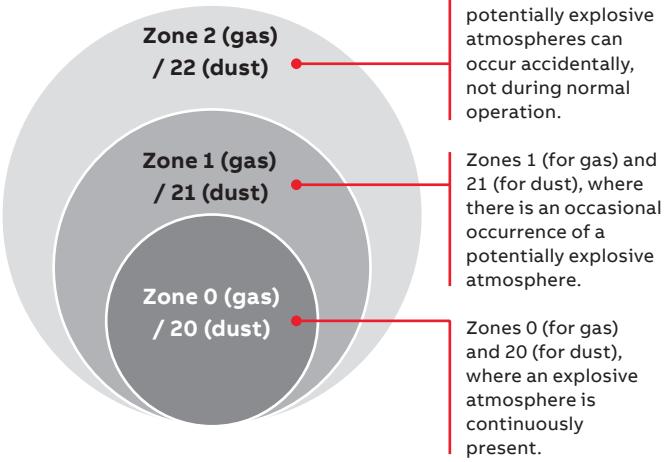
What is a potentially explosive atmosphere, and where can it be?
Explosive atmospheres occur when flammable gases, mist, vapors or dust are mixed with air, which creates a risk of explosion. A potentially explosive area is defined as a location where there is a risk of flammable mixes. These atmospheres can be found across industries, from **chemical, pharmaceutical** and **food**, to **power** and **wood processing**. The electrical equipment that is installed in such locations must be designed and tested to endure these conditions and guarantee a safe function.

What does ATEX mean?
The term ATEX comes from the French words "ATmosphères EXplosibles," and it is a combination of two EU directives: the Worker Protection Directive 1999/92/EC; and the Product Directive 2014/34/EU. **The ATEX Directives are designed to protect employees, the public and the environment from accidents resulting from explosive atmospheres.**

ATEX provides similar guidelines to the IECEx System, with a few exceptions, and with certification of protective devices (e.g., drive-integrated safety functions).

How to ensure safe operation?
With ABB's ATEX-certified offering and services, safe operation can be ensured.
Motors are directly connected to the machines in potentially explosive atmospheres, and certain issues need to be considered when selecting a motor and a drive. Drives themselves are not to be used in potentially explosive atmospheres. These atmospheres have a defined zone classification, and the zone defines the minimum requirements (category) the motors must comply with. The category defines the permitted motor protection types.

Potentially explosive atmosphere zones
Within industries, all potentially explosive atmospheres are required to have an area classification called Zones. Globally, a Zone system is used to classify potentially explosive areas. The Worker Protection Directive 1999/92/EC and the EU standards IEC 60079-10-x, EN 60079-10-x define these zones. In all cases, the owner of the site where the potentially explosive atmosphere exists has the responsibility to define the zones according to the requirements.



Tested packages

Motor and drive combinations are **tested and certified in ABB's test center**. By using an ABB motor with an ABB drive as a package, you can enjoy the benefits of efficient, high-performance motors with optimal speed and control accuracy – without compromising on safety.

With the ABB ATEX-certified motor and drive package, the ATEX-certified temperature protection modules are not obligatory, the tested combinations fulfill the IEC/ATEX standards and ensure safe performance.

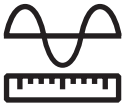
- No additional testing and certification are needed
- No ATEX thermistor protection modules are needed
- Safe and cost-effective solution for industries in potentially explosive atmospheres

Safe motor temperature

For non-tested and certified motors and drives (e.g., for use with other manufacturers' motors), ATEX-certified temperature protection is an integrated option.

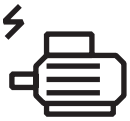
ACS880's ATEX-certified thermistor protection module, Ex II (2) GD, FPTC-02, can be integrated into the drive if the motor is operating in a potentially explosive environment. **The purpose of the safety function is to disconnect the motor from the power supply before the motor overheats and causes a risk of explosion in an ATEX environment.**

Correct dimensioning



Correct dimensioning is important. **Correctly sized motors and drives reduce motor frame heating**. They also help reduce energy use.

Insulation and drive filters



ABB's offering for correct insulation and filters **protects the motor** from voltage phenomena, bearing currents and motor overheating. The insulation and filters must be selected according to voltage and frame size.

Easy drive upgrades

With the drive upgrades below, the ATEX certification stays valid from the old to the new generation models. This means that there is no need for new ATEX certification during the upgrade. This saves you time and money.

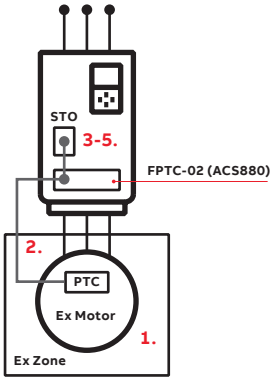
ATEX certification approved – old generation model	Comparable converter upgrade	ATEX certification stays valid – new generation model
ACS600, ACS800	→	ACS880

Global service and support network

ABB's global network of certified service providers is trained and experienced to help you with motors and drives for applications in explosive atmospheres.

The support network ensures that your ABB Declaration of Conformity is retained.

ABB's ATEX-certified thermistor protection module, Ex II (2) GD, FPTC-02



With option +L537 +Q971:

1. Motor temperature rises above the PTC sensor limit temperature.
2. The sensor resistance increases very sharply and indicates overheating to the ATEX-certified module, Ex II (2) GD.
3. The module switches the STO (Safe Torque Off) circuit off, which activates the STO function.
4. The STO function disables the control voltage in the power semiconductors of the drive output stage.
5. The drive is prevented from generating the required torque to rotate the motor.

▸ **The safe state is guaranteed**

Note:
The FPTC-02 module can be managed as a loose option and can also be retrofitted to the drive; in this case, to be compliant with regulations, the customer must ensure the following requirements:
- that the serial number of the drive/inverter module starts with 1 or 8
- that the drive and option serial number is paired in a DIB (Drive Installed Base) portal
- that the included ATEX label for the SMT (Safe Motor Temperature) function is attached to the drive/inverter module to ensure the ATEX compliance of the safety circuit
- that the option module is installed in an option slot of the drive control unit and the applicable drive parameters are set
- that the PTC temperature sensors of the motor are connected to the PTC inputs of the option module.

* For further information, please contact local ABB

ABB's ATEX-certified thermistor protection module

Option code	Ordering code	Description
+L537 +Q971	3AXD50000024924	ATEX-certified thermistor protection module FPTC-02 , Ex II (2) GD

Sine filters

Combined with a sine filter, ACS880 drives offer smooth motor operation in both DTC and scalar modes. The sine filter suppresses the high-frequency components of the motor's output voltage, creating almost a sinusoidal voltage wave form for the motor. The filter offers an optimized LC design that takes into account the switching frequency, voltage drop and filtering characteristics.

The ACS880 inverter and sine filter solution can be used with a variety of requirements for products and components:

- For motors without adequate insulation for the role
- Where the total motor cable length is long as a result of a number of parallel motors
- For step-up applications, e.g., where a medium-voltage motor needs to be driven
- For submersible pumps with long motor cables, e.g., in the oil industry
- When the motor noise needs to be reduced
- When there are industry-specific requirements for peak voltage level and voltage rise time

Sine filter for wall-mounted single drives, ACS880-01

U_N = 400 V (range 380 to 415 V). The power ratings are valid at nominal voltage 400 V.

Nominal ratings	
I_N	Rated current of the drive-filter combination available continuously without overload at 40 °C.
P_N	Typical motor power

[1] Please note that sine filters cause a voltage drop, reducing the available shaft power from the motor.
[2] Noise level is a combined value for the drive and the filter. Heat dissipation is a value for the filter.
For further information, please contact your local ABB office.

U_N = 500 V (range 380 to 500 V). The power ratings are valid at nominal voltage 500 V.

Nominal ratings	
I_N	Rated current of the drive-filter combination available continuously without overload at 40 °C.
P_N	Typical motor power

[1] Please note that sine filters cause a voltage drop, reducing the available shaft power from the motor.
[2] Noise level is a combined value for the drive and the filter. Heat dissipation is a value for the filter.
For further information, please contact your local ABB office.

[1] Please note that sine filters cause a voltage drop, reducing the available shaft power from the motor.
[2] Heat dissipation and noise level are combined values for the drive and the filter.
[3] Higher power available as application engineered (+P902).
For further information, please contact your local ABB office.

Sine filters for cabinet-built regenerative and ultra-low harmonic drives, ACS880-17 and ACS880-37

[1] Please note that sine filters cause a voltage drop, reducing the available shaft power from the motor.
[2] Noise level is a combined value for the drive and the filter.
[3] Heat dissipation is a combined value for the drive and the filter, except for frame sizes R8 and R11, whose heat dissipation value is for the filter only.
[4] Higher power available as application-engineered (+P902).
Sine filters for larger types are available as a customized option.
For further information, please contact your local ABB office.

Brake options

01 Brake resistor, SACE15RE13

Brake chopper

The brake chopper is built in as standard for ACS880-01 frame sizes R1 to R4. For other constructions and frames, a brake chopper is a selectable internal option (except for ACS880-11 and ACS880-31, where the chopper is an external option*). Braking control is integrated into ACS880 single drives. It not only controls braking but also supervises system status and detects failures such as brake resistor and resistor cable short circuits, chopper short circuits, and calculated resistor overtemperature.

Brake resistor

The brake resistors are separately available for ACS880-x1 and built in for the cabinet-built ACS880-x7. Resistors other than the standard option resistors may be used, provided that the specified resistance value is not decreased, and that the heat dissipation capacity of the resistor is sufficient for the drive application. No separate fuses in the brake circuit are required if e.g., the mains cable is protected with fuses, and no mains cable/fuse overrating takes place.

*) For more information, please contact your local ABB office.

All brake resistors are to be installed outside the converter module. The JBR brake resistors are built in to an IP20 metal housing.
The SACE brake resistors are built in to an IP21 metal housing. The SAFUR brake resistors are built in to an IP00 metal frame.

Ratings

P_{brcont}	Continuous brake chopper power. The value applies to the minimum resistance value. With a higher resistance value, the P_{brcont} may increase in some ACS880 units.
R	Resistance value for the listed resistor type.
R_{min}	Minimum allowable resistance value for the brake resistor.
E_r	Energy pulse that the resistor assembly will withstand (400 s duty cycle). This energy will heat the resistor element from 40 °C to the maximum allowable temperature.
P_{rcont}	Continuous power (heat) dissipation of the resistor when placed correctly. Energy E_r dissipates in 400 seconds.

Brake choppers and resistors for larger types are available as customized option.

Ratings	
P_{brmax}	Maximum braking power of ACS880 equipped with the standard chopper and resistor.
R	Resistance value for the listed resistor type.
R_{min}	Minimum allowable resistance value for the brake resistor.
E_r	Energy pulse that the resistor assembly will withstand (400 s duty cycle). This energy will heat the resistor element from 40 °C to the maximum allowable temperature.
P_{cont}	Maximum continuous braking power
I_{max}	Maximum peak current during braking. Current is achieved with recommended resistor resistance.
I_{rms}	Corresponding rms current during load cycle.
P_{rcont}	Continuous power (heat) dissipation of the resistor when placed correctly. Energy E_r dissipates in 400 seconds.

Additional width for ACS880-07	
Brake quantity	Width (mm)

Brake choppers and resistors for larger types are available as a customized option.
[2)] = +D150+D151 if resistor is ordered

Ratings	
P_{brmax}	Maximum braking power of ACS880 equipped with the standard chopper and resistor.
R	Resistance value for the listed resistor type.
R_{min}	Minimum allowable resistance value for the brake resistor.
E_r	Energy pulse that the resistor assembly will withstand (400 s duty cycle). This energy will heat the resistor element from 40 °C to the maximum allowable temperature.
P_{cont}	Maximum continuous braking power
I_{max}	Maximum peak current during braking. Current is achieved with recommended resistor resistance.
I_{rms}	Corresponding rms current during load cycle.
P_{rcont}	Continuous power (heat) dissipation of the resistor when placed correctly. Energy E_r dissipates in 400 seconds.

Brake options, ACS880-07CLC, ACS880-17LC and ACS880-37LC

For liquid-cooled cabinet drives, ACS880-07CLC, -17LC and -37LC, brake options are available as engineered variants.

Du/dt filters

Du/dt filtering suppresses inverter output voltage spikes and rapid voltage changes that stress motor insulation. Additionally, du/dt filtering reduces capacitive leakage currents and high-frequency emissions from the motor cable, as well as high-frequency losses and bearing currents in the motor. The need for du/dt filtering depends on the motor insulation. For information about the construction of the motor insulation, consult the manufacturer.

If the motor does not meet the following requirements, the lifetime of the motor may decrease. Insulated N-end (non-driven end) bearings and/or common mode filters are also required for motor bearing currents with motors bigger than 100 kW. For more information, please see the ACS880 hardware manuals.

Please see below for information about how to select a filter according to the motor.

Filter selection table for ACS880

Motor type	Nominal AC supply voltage	Requirements for			
		Motor insulation system	ABB du/dt and common mode filters, insulated N-end motor bearings		
			P_N < 100 kW and frame size < IEC 315	100 kW ≤ P_N < 350 kW or IEC 315 ≤ frame size < IEC 400	P_N ≥ 350 kW or frame size ≥ IEC 400
			P_N < 134 hp and frame size < NEMA 500	134 hp ≤ P_N < 469 hp or NEMA 500 ≤ frame size ≤ NEMA 580	P_N ≥ 469 hp or frame size ≥ NEMA 580
ABB motors

HPD	Consult the motor manufacturer.				

[1] Manufactured before 1.1.1998.
[2] For motors manufactured before 1.1.1998, check for additional instructions with the motor manufacturer.

Non-ABB motors					
Random-wound and form-wound	U_N ≤ 420 V	Standard: $\hat{U}_{LL}$ = 1300 V	–	+ N or CMF	+ N + CMF
	420 V < U_N ≤ 500 V	Standard: $\hat{U}_{LL}$ = 1300 V	+ du/dt	+ du/dt + N or + du/dt + CMF	+ du/dt + N + CMF
		Reinforced: $\hat{U}_{LL}$ = 1600 V, 0.2 microsecond rise time	–	+ N or CMF	+ N + CMF
	500 V < U_N ≤ 600 V	Reinforced: $\hat{U}_{LL}$ = 1600 V	+ du/dt	+ du/dt + N or + du/dt + CMF	+ du/dt + N + CMF
		Reinforced: $\hat{U}_{LL}$ = 1800 V	–	+ N or CMF	+ N + CMF
	600 V < U_N ≤ 690 V	Reinforced: $\hat{U}_{LL}$ = 1800 V	+ du/dt	+ du/dt + N	+ du/dt + N + CMF
		Reinforced: $\hat{U}_{LL}$ = 2000 V, 0.3 microsecond rise time [3]	–	+ N + CMF	+ N + CMF

[3] If the intermediate DC circuit voltage of the drive is increased from the nominal level due to long term resistor braking cycles, check with the motor manufacturer if additional output filters are needed in the applied drive operation range.

The abbreviations used in the table are defined below

Abbr.	Definition
U_N	Nominal AC line voltage.
$\hat{U}_{LL}$	Peak line-to-line voltage at motor terminals which the motor insulation must withstand.
P_N	Motor nominal power.
du/dt	du/dt filter at the output of the drive. Available from ABB as an optional add-on kit.
CMF	Common mode filter. Depending on the drive type, CMF is available from ABB as a factory-installed option (+208) or as an optional add-on kit.
N	N-end bearing: insulated motor non-drive end bearing.
n/a	Motors of this power range are not available as standard units. Consult the motor manufacturer.

Applicability

Separate du/dt filters are available for ACS880-01, -11 and -31. Unprotected IP00 filters must be placed in an enclosure that provides an adequate degree of protection.

Factory-installed du/dt filters are available for ACS880-07. They are installed inside the drive cabinet.

Digital solutions and connectivity for drives

ABB digital tools and connectivity for drives enhance the performance, reliability, and efficiency of the whole system throughout the entire drive life cycle, which gives end users a new level of trust.

Plan – Tools for smooth selection journey

- **ABB GoSelect**
- **DriveSize**
- **EcoDesign tool**
- **EnergySave calculator**
- **LV Drives Configurator**
- **DriveUpgrade**
- **Removable memory unit**

Design – Engineering tools for advanced customization

- **ABB Ability™ Virtual Commissioning for drives**
- **Drive Application Builder**

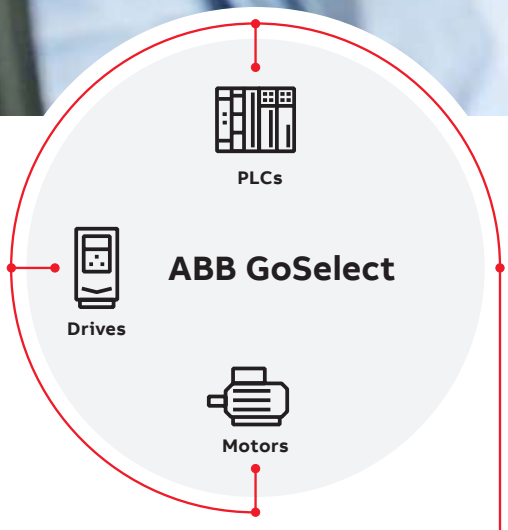
Build and maintain – User tools for superior drive management

- **Drive Composer**
- **ABB Crealizer™**
- **ABB Ability™ Mobile Connect for drives**
- **Drivetune mobile tool**
- **Drivetune mobile app**
- **ABB Access**
- **Drive Assistant Control panels**
- **Door mounting and panel bus**
- **Communication and connectivity**
- **Fieldbus and Industrial Ethernet solutions**
- **PROFINET S2 system redundancy for ABB drives**
- **Connectivity to automation systems**
- **ABB drives and OPC UA**
- **Feedback interface and DDCS communication options**
- **Functional safety offering**
- **Certified safety built-in with ACS880 drives**

+ ABB GoSelect web-based tool

Build the optimal solution for your application quickly and easily online

ABB GoSelect is a web-based selection and dimensioning tool for motors, drives, and PLCs. Build the optimal solution for your application and efficiently create, collect, and manage documentation and reports – all in one place.



Improved productivity
ABB GoSelect's modern, intuitive interface is easy to use. You can start by following the guided selection journey to get help finding the most suitable products. If you have already identified the right product for your application, you can proceed directly to sizing. The tool can also be used to validate the selected solution directly.

All in one place
With ABB GoSelect you can select, dimension, and validate your solution – all-in-one convenient online portal, with or without logging in. No more searching and saving links or skipping between different tools. The tool eliminates the need to duplicate input data across multiple tools, bringing all your project documentation together in one place. No more wasted time.

Efficient collaboration
With ABB GoSelect, the whole team can provide their input in one place in real time. You can create different alternatives in one project to make it easy to compare your options and track the project history. No more time-consuming and confusing file exchanges via email.

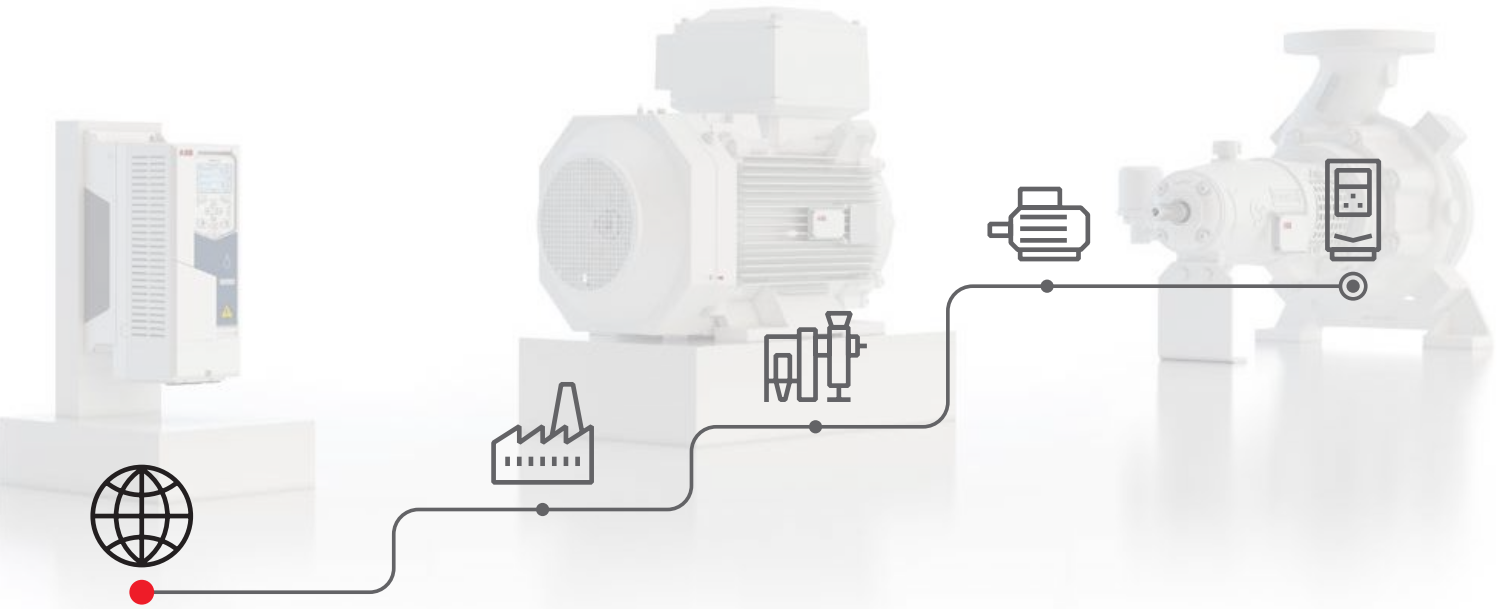
goselect.motion.abb.com

M



+ DriveSize

DriveSize helps you select an optimal motor, drive, and transformer, and contains current versions of our motor and drive catalog. DriveSize can compute network harmonics and create dimensioning documents.

new.abb.com/drives/software-tools/drivesize

+ EnergySave calculator

Calculate how much energy and money you could save by using ABB drives while also deriving other benefits such as soft starting and stopping, an improved power factor, and connection into process automation.

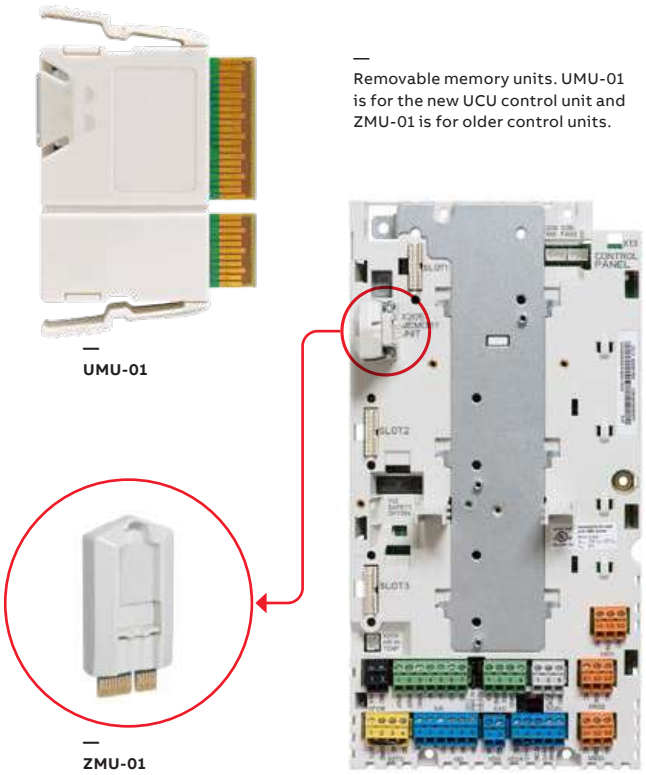
new.abb.com/drives/software-tools/energysave-calculator

+ Removable memory unit

The ACS880 drives feature a removable memory unit that plays a crucial role in storing essential software and settings, including motor data. This unit can be switched from one drive to another, allowing simple and rapid drive replacement without any special equipment, software loading, parameter settings, or other adjustments in the drive or automation system. It also eliminates the risk of software incompatibility. The new drive is ready to run as soon as the memory unit is plugged in.

Memory unit contains the following key components:

- Drive's firmware
  - The core software that controls the drive's operations
- Communication settings
  - Configurations for how the drive communicates with other devices
- Encoder settings
  - Information related to the encoder used in the drive
- I/O extension options
  - Configurations for input/output extensions
- Parameter setup
  - User-defined settings for the drive's operation
- Application program
  - This includes any customizations made by the user
- Custom IEC programs
  - If applicable, these are user-defined programs following the IEC standard
- Motor identification
  - Information that helps in identifying the motor connected to the drive



—
Removable memory units. UMU-01 is for the new UCU control unit and ZMU-01 is for older control units.

—
ZMU-01

Additionally, the memory unit is secured with embedded data encryption to protect proprietary information and prevent unauthorized modifications. Each new ACS880 drive is supplied with a memory module, and replacement modules can be obtained through ABB's Drive Services or Warranty Services.

+ ABB Ability™ Virtual Commissioning for drives

Virtual engineering and commissioning allow machine builders and system integrators to develop and simulate entire industrial processing lines and machines, including ACS880 drives, without actually running the hardware. This gives valuable benefits in the phases of designing, commissioning and operating machines.

Design safely and efficiently
Engineers can start configuring and programming drives well before receiving them from ABB production line, since the same software tools like Drive Composer Pro can be used with virtual and real drives. Virtualization can also cover the kinematical and physical behavior of the machine and the overriding automation. Virtual drives can also be used with the Drive Application Builder and ABB Automation Builder programming tools to build more complete virtual machines and processing lines.

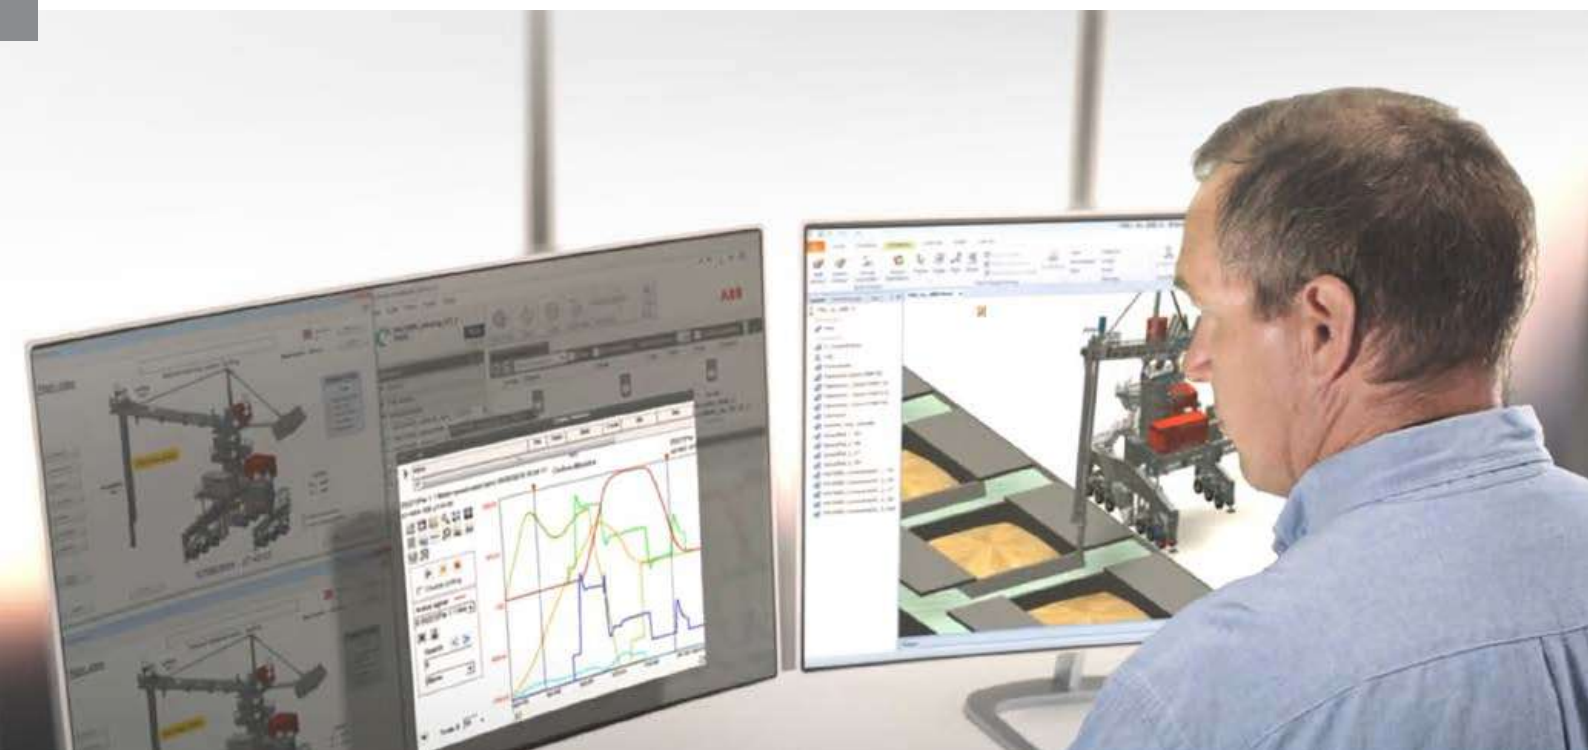
After deploying the virtual machine in use on-site, any future improvements can be virtually tested before implementing them in the process. This all supports safety and quality in the engineering process.

Benefits
Throughout the value chain from sales, marketing, and training to field engineering and product development, virtual commissioning makes drive applications more easily understood and helps to:

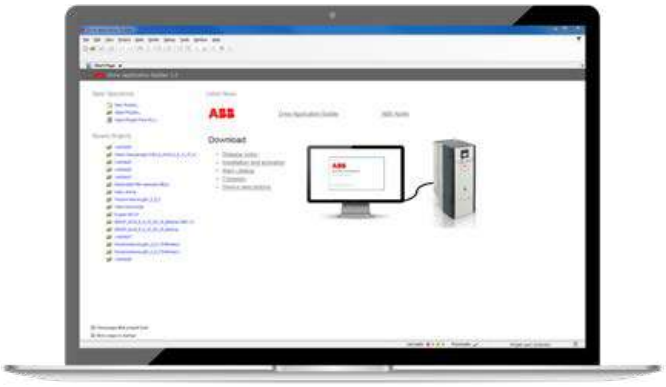
- Design, test and learn drive applications virtually with the same software tools as for the actual hardware
- Train users and engineers with application simulation
- Tune up drive parameters easily off-site before going into more demanding on-site testing
- Find and solve potential problems earlier
- Save time and money due to faster drive commissioning
- Assist the dimensioning and energy optimization of electromechanical drive systems

Save time, reduce risk, and increase engineering productivity

For more information, please see new.abb.com/drives/software-tools/virtual-commissioning-for-drives



+ Drive Application Builder



Drive application programming lets you create cutting-edge advantages in your machines, thanks to the built-in PLC functionality of ACS880 drives. The application program runs on top of the drive's standard drive firmware.
This allows seamless implementation of custom control algorithms in addition to the standard drive functionality, access to the drive peripheral I/O and customization of the drive user interface.

—

Combine your application knowledge with the world's number one electrical drives

Drive application programming is accomplished with the Drive Application Builder tool and based on the well-known IEC 61131-3 standard. This standard allows to start a program development with minimal training and to transfer customized programs to other platforms.

Benefits and Features of Drive Application Programming include:

- Cost savings and higher reliability, due to fewer system components and simpler installation work because no external PLC is needed
- Compact solution requires less cabinet space, as the PLC is inside the drive enclosure, with the same IP class
- Performance and productivity improvements, since decentralized machine control enables faster control loops
- No need for a separate HMI, as a drive control panel can be used instead in some applications
- Creation of intelligent applications with several drives, using the drive-to-drive communication

Drive Application Builder is a tool for developing IEC 61131-3 programs in a drive-embedded PLC.

Standard features:

- IEC 61131-3 programming
- 160KB of program memory
- Running application program in parallel drive FW in tree configurable tasks (1ms-1000ms)
- Interface to standard drive parameters
- Adding customer parameters
- Adding customer events
- Drive I/O programming
- Drive-to-drive communication

Ordering code	Description	PC tool
3AXD50000342389	Standard version of the Drive Application Builder for IEC 61131-3 programming, DABS-STANDARD	Licenses for Drive Application Builder [1]

+ Drive Composer

Drive Composer is an easy-to-use, reliable, and secure tool for commissioning, monitoring, and troubleshooting ABB all-compatible drives.

The **entry** version of Drive Composer provides basic functionality for setting parameters, basic monitoring, taking local control of the drive from the PC, and event logger handling. The entry version is available for free and can be downloaded from below.

Drive Composer **pro** is the full-fledged commissioning and troubleshooting tool. Order Drive Composer pro through ABB sales channels. Existing license holders can upgrade to latest version of Drive Composer pro by downloading the installation package from below.

Display and analyze of data logged in a drive	–	●
Maintenance		
Display of System info (basic information about the drive and its options)	●	●
Connect to Drive installed base (DIB) service portal (register, search, report)	●	●
Backup/restore functions	●	●
Advance restore (restore a set of components/parameter settings)	–	●
Create backup of all connected drives in a computer network	–	●
User interface available in different languages	●	●
Virtual drive launcher available	–	●
Use an OPC-based commissioning and maintenance tool	–	●

+ ABB Crealizer™

Optimize performance
Crealizer™ is a new open software platform integrated into ABB drives operating system to empower you to create, validate and realize customized solutions specific to the needs of your business.

Crealizer™ performs and measures in real time so you have instant access to faster data collection, higher accuracy, rapid prototyping and validation.

Shorter time to market
Independence to feature development and firmware release cycles of drive vendor.

Lower system cost
Reduce the amount of overriding controllers.

Risk reduction
Reduction through straightforward quality testing and prototyping to fast deployment.

Co-creation with ecosystem
Enables co-creation with other domain experts to solve challenging system level problems or a marketplace with pre-built applications from ABB and the ecosystem partners which extends the capabilities of the drive.

Cyber security
Guarantees equipment and data security by authentication of the signed app.

CREATE
- Create or co-create new solutions or benefit from existing ones
- The possibilities are endless using either PLC standard IEC 61131, high-level language C++, or model-based coding from Matlab/Simulink

VALIDATE
- Validate your new application through simulation options to mitigate risk and enable fast implementation
- Software-based validation allows for full optimization for real hardware conditions

REALIZE
- Realize your new solution within your Drive or fleet
- Discover existing solutions on our dedicated online platform and reuse it for your Drive
- Make your solution available for others and publish it on our webpage

For more information, see:
new.abb.com/drives/digital-offering

+ ABB Ability™ Mobile Connect for drives

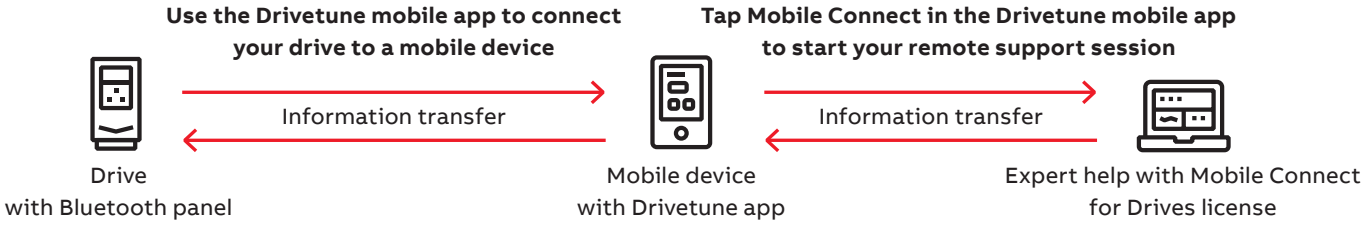
Easy access to remote support
ABB Ability™ Mobile Connect for drives is a platform for remote drive support consisting of the Mobile Connect web portal and the Drivetune mobile app.

The platform allows ABB service partners to provide remote commissioning and troubleshooting support for personnel on-site without any complex connectivity infrastructure. Chats, sharing images and backups, viewing parameters online and sending support packages are all possible, making your technical support process quick and efficient.

All that is needed is the Bluetooth control panel and a mobile device.

The platform is available for ABB partners and OEMs under a renewable subscription-based agreement.

ABB Ability™ Mobile Connect for drives support portal



+ Drivetune mobile app for managing drives via an intuitive interface

Drivetune mobile app is a powerful tool for performing basic drive startup and troubleshooting tasks. It is possible to connect with drives and access data available in the Internet at the same time. The wireless Bluetooth connectivity means that users won't need to enter hazardous or difficult-to-reach work areas to access information necessary to help them commission and tune the drive.

- **Startup, commission and tune your drive and application with full parameter access**
- **Optimize performance via drive troubleshooting features**
- **Create and share backups and support packages**
- **Keep track of drives installed base**

Download Drivetune mobile app

Google play

Available on the App Store

+ Drivetune mobile app

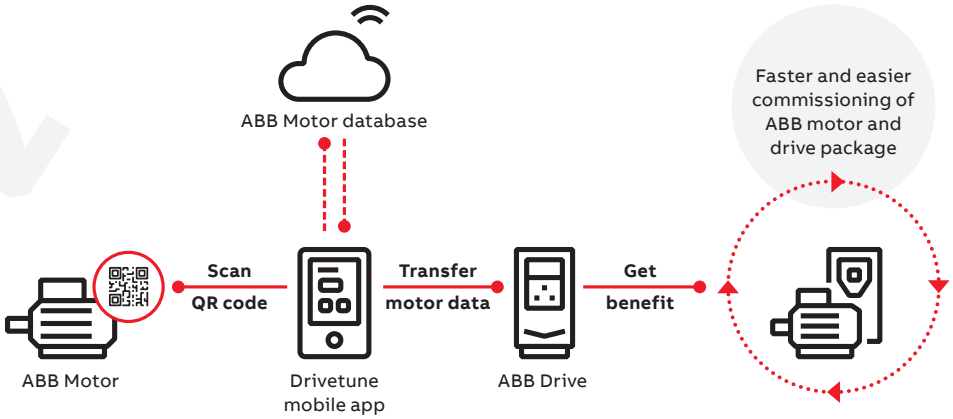
Motor QR code reader for quick and reliable motor parameter setting with ABB Drive-Motor package

Drivetune mobile app with motor QR code reader quickly and easily transfers ABB motor* data to drive parameters.

Faster and easier commissioning
- Quick and reliable motor parameter setup
- Scan the QR code or enter the motor serial number to get the data for parameters
- Less manual work and reduced risk of error when commissioning motors
- Drivetune helps to filter motor configurations

Easy to use
- Same motor QR code for ABB Access and Drivetune
- Share motor nameplate file between users/devices
- Add descriptive name and comments to motor nameplate file

ABB motors and drives are designed to complement each other, allowing you to optimize your machine speed and reduce energy consumption.



Download free from the Apple App Store or Google Play.

Available on the App Store

Google play

* Drivetune does not currently support all ABB motors. We are working to expand the range of supported motors. If you receive a message saying **'data not available'** when scanning a QR code, you will need to enter the data manually.

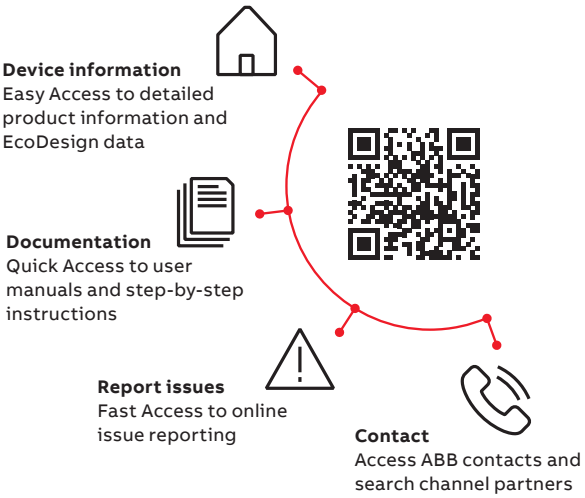
More information about the Drivetune app can be found on the ABB website.

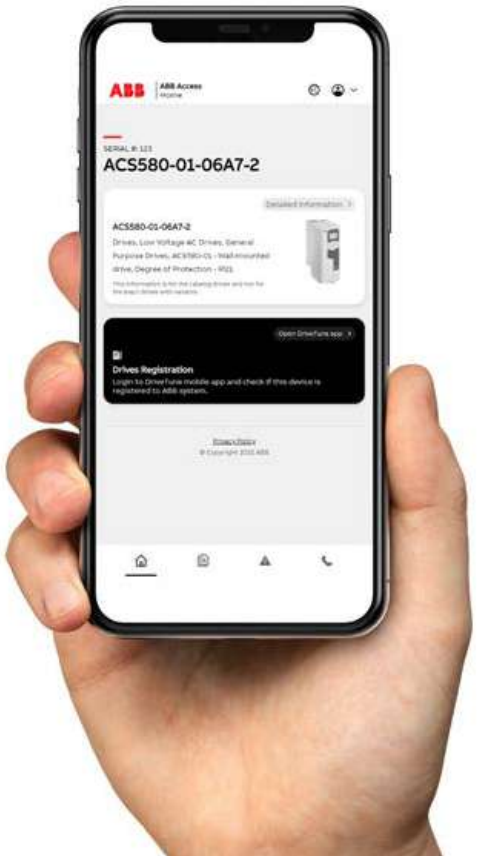
+ ABB Access

Scan the QR code to access 24/7 self-services for ABB drives, motors and PLCs

With ABB Access, you can unlock all aspects of your drives, motors or PLCs, from one central location: the palm of your hand.

Simply scan the QR code on the ABB product to get started
ABB Access, helps you easily find up-to-date product online data. It also provides easy access to documentation and manuals. If you happen to experience issues with your ABB product, this can be fastly and easily reported online to reach expert support from ABB.





+ Drive Assistant Control panels

Easy commissioning and operation

ABB has a wide range of drive HMI options with different value proposition for customers – from the low-cost, easy-to-use Basic control panel to the Drive Connectivity panel which is a plug-and-play solution for the ABB Ability™ Digital Powertrain for remote condition monitoring and expert support.

Bluetooth control panel
The control panel with built-in Bluetooth enables easy and secure wireless connection with the Drivetune mobile app. With the entry version of Drive Composer software tool, you can startup, commission, maintain, and get remote support of ABB all-compatible drives.

Assistant control panel
ACS-AP-I control panel works with all ABB drives, making it easy to use one panel with different products. Enhanced usability, intuitive and appealing interface, easy navigation.

Drive Connectivity Panel
Control panel variant with built-in Bluetooth and mobile radio. It offers easy remote condition monitoring, plug, and play installation with secure and reliable wireless connection to the ABB Ability™ Digital Powertrain, the cloud-based condition monitoring portal for ABB Drives. Possible to connect with the Drivetune mobile app and Drive Composer Entry PC tool as well. Available with a renewable subscription to the ABB Ability™ Digital Powertrain.

For more information, please see new.abb.com/drives/connectivity/user-interface-options/assistant-control-panels

+ Door mounting and panel bus

Improve safety and leverage the full potential of the ACS880 control panel options with a door mounting kit and panel bus adapter.

— 01 — 02 — 03

— 01
Control panel mounting platform, DPMP-01, is for flush mountings and has IP54/UL Type 12 protection class (IP20, when control panel is not mounted). Supports daisy chaining of the control panel link.
— 02
Control panel mounting platform, DPMP-02, is for surface mounting and has IP65/UL Type 12 protection class (IP20, when control panel not mounted).
— 03
Control panel mounting platform, DPMP-04, is a lockable door mounting platform for drive control panels in outdoor installations or harsh environments. It has a IP66 protection class, UV resistance and IK07 impact protection rating.

Door mounting fosters easy operation and safety. It enables you to operate the drive without opening the cabinet door, saving time and keeping all the electronics behind the closed door.

Cabinet door

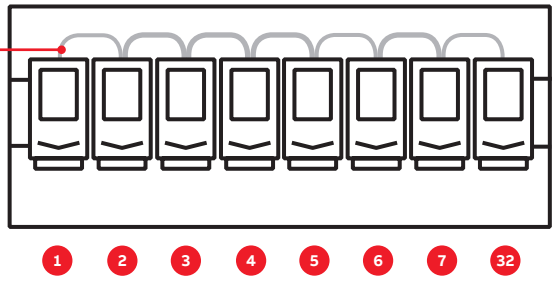
Control panel mounting platform
The mounting platform for the drive's control panel.

Bluetooth Assistant control panel
The Bluetooth control panel comes as standard with ACS880 drives. Also an control panel without wireless connection can be used.

Panel bus
Panel bus connectors come as standard in wall-mounted ACS880-01, -11 and -31 drives. With other ACS880 drives, the panel bus can be implemented by using a FDPI-02 interface.

Up to 32 drives can be connected to one control panel for even easier and quicker operation. When using the panel bus, you need only one assistant control panel.

Cabinet, outside



Cabinet, inside

—
Control panel options
Bluetooth Assistant control panel ACS-AP-W is included as standard in the delivery.
ACS-AP-W (+J400) can be replaced by +J options below.

Option code	Ordering code for loose item	Description	Type
+0J400	–	No control panel	–
–	3AXD0000025965	Bluetooth Assistant control panel. Included as standard	ACS-AP-W
+J425	3AUA0000088311	Industrial assistant control panel without Bluetooth connection	ACS-AP-I
+J410	3AUA0000108878	Control panel mounting platform, flush mounted, IP54/UL Type 12 (does not include control panel)	DPMP-01
+J413	3AXD50000009374	Control panel mounting platform, surface mounted, IP65/UL Type 12 (does not include control panel)	DPMP-02
–	3AXD50000217717	Control panel mounting platform for outdoor and harsh environments, IP66, UV resistance, IK07 impact protection rating (does not include control panel)	DPMP-04

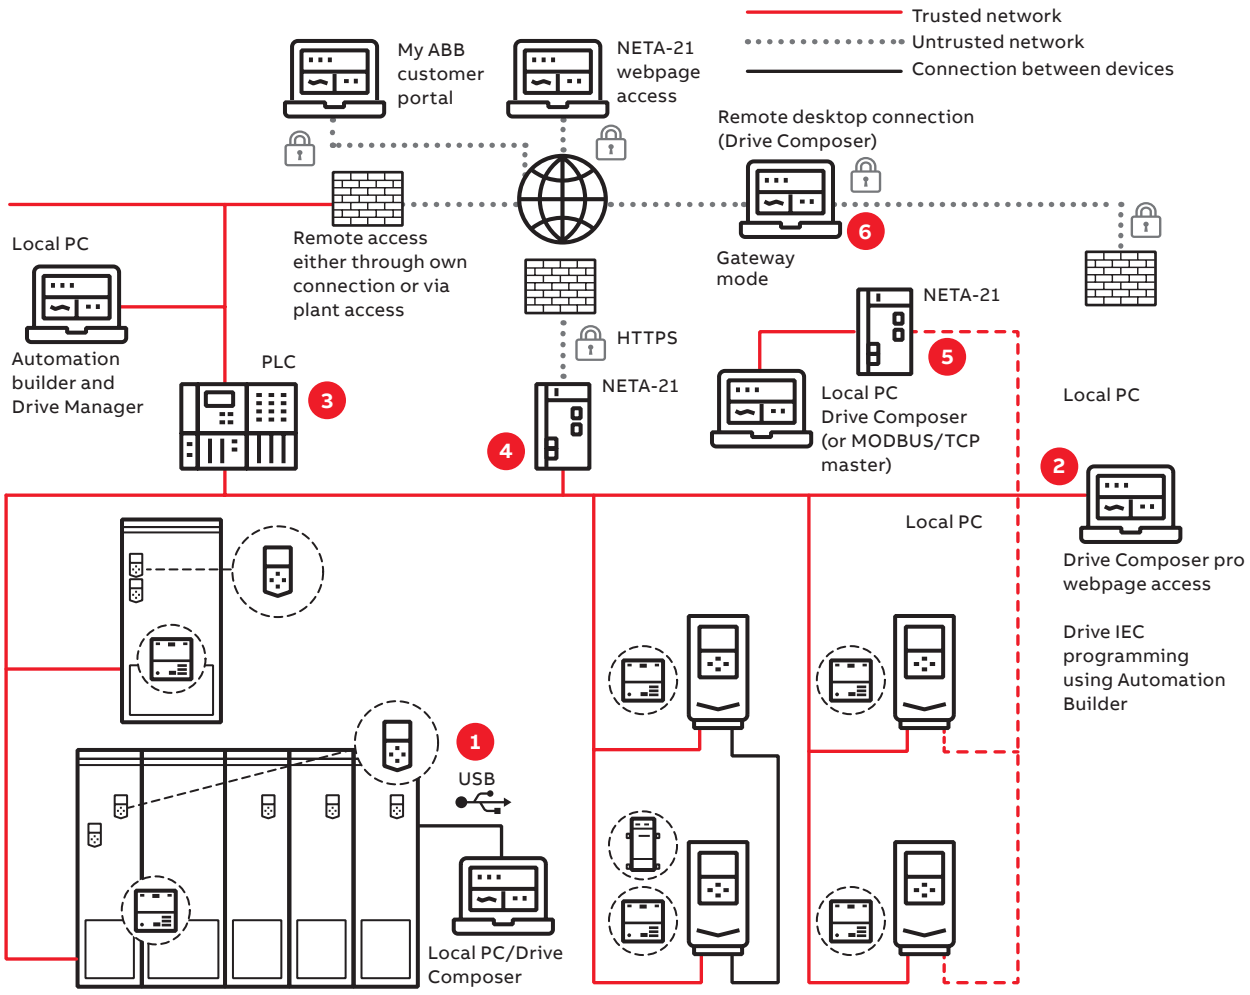
+ Communication and connectivity

Fast and reliable communication

- Reduces mechanical and electrical cost
- Decreases downtime
- Increases productivity
- Reduces startup costs
- Lower maintenance and diagnostic costs
- Quick access to networked drives with PC-based startup and maintenance software tools
- Reduces wiring costs compared to traditional I/O connections

—

Industrial automation plant – different network possibilities and their secure deployment



1. Local connections (point-to-point serial communication, e.g., USB) or
2. Shared (with control) upper-level physical fieldbus network (e.g., PROFINET) using Ethernet tool communication and/or
3. Also communication through PLC system using Drive Manager device tool or
4. NETA-21 remote monitoring tool web interface or
5. NETA-21 acting as a gateway between or
6. Third-party remote desktop connection.

+ Fieldbus and Industrial Ethernet solutions

Easy, secure, and reliable integration with the leading automation ecosystems

ABB is a technology leader in digital automation communication networks. We provide device integration, wireless and wired products, and systems that help you to make the Industrial Internet of Things a reality.

A wide variety of fieldbus solutions are available and all major fieldbus protocols are supported by ABB drives, giving you the flexibility, compatibility, and security, you need. So, whatever your preferred communication networks and automation systems, we have a suitable solution.

Thanks to embedded protocols and a wide range of **F-series fieldbus interface modules**, ABB drives provide reliable connectivity with your automation systems, with a simplified interface to control and manage all your ABB drives in low to medium voltage ranges.

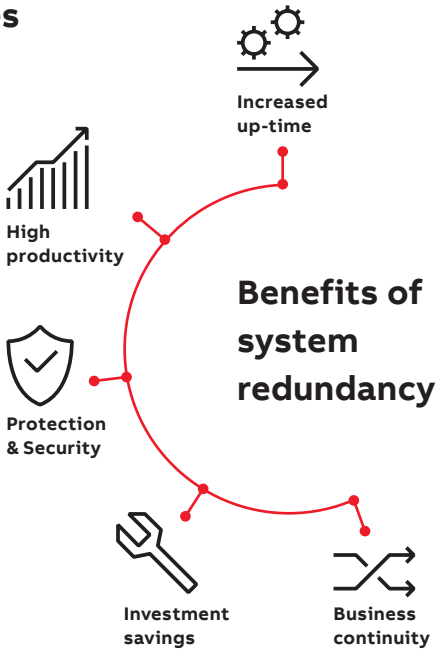
+ PROFINET S2 system redundancy for ABB drives

System redundancy is a high-priority requirement in process industry and infrastructure installations where the system must be operational even during component breakdowns and malfunctioning. The interruption of a continuous production process has the potential to lead to large financial losses or safety hazards. Thanks to the new PROFINET S2 system redundancy of ABB drives, unwanted downtime can be minimized. This leads to better process control, with improved productivity.

PROFINET system redundancy S2 is now available for ABB drives with the optional PROFINET interface module FPNO-21. It allows the drive to establish a connection with two control PLCs in a redundant manner.



PROFINET IO
2-port interface module.
Certified according to
Conformance Class B (CC-B)

SNTP Time synchronization

For all-compatible drives portfolio

Ethernet tool network
PROFINET IO at the same time
with Drive Composer pro

PROFINET Shared Device
PROFIsafe support with FSO-12/-21

M

+ Connectivity to automation systems

Communication protocol adapters
ACS880 industrial drives are compatible with a wide range of communication protocols. The drive comes with a Modbus RTU fieldbus interface as standard.

ACS880 supports two different communication connections simultaneously and offers the possibility of redundant communication. PROFIsafe (functional safety over PROFINET) and CIP Safety™ are also supported.

—
Communication protocol adapters

Option code	Ordering code for loose item	Communication protocol	Adapter
+K451	68469341	DeviceNet™	FDNA-01
+K454	68469325	PROFIBUS DP. DPV0/DPV1	FPBA-01
+K457	68469376	CANopen®	FCAN-01
+K458	3AUA0000031336	Modbus RTU	FSCA-01
+K462	3AUA0000094512	ControlNet	FCNA-01
+K469	3AUA0000072069	EtherCAT®	FECA-01
+K470	3AXD5000019239	POWERLINK	FEPL-02
+K491	3AXD50000049964	Modbus/TCP	FMBT-21
+K492	3AXD50000192779	PROFINET IO	FPNO-21 [1]
+K490	3AXD50000192786	EtherNet/IP	FEIP-21
+Q986	3AXD50000112821	PROFIsafe safety functions module	FSPS-21
+Q989	3AXD50001021061	CIP Safety™ functions module	FSCS-21

[1] For the PROFIsafe to work, the PROFINET adapter module (FPNO-21) and the safety functions module FSO-12 (+Q973) or FSO-21 (+Q972) are required. The FPNO-21 adapter module enables PROFINET system redundancy S2, allowing the drive to establish a connection with two control PLCs in a redundant manner.

—
ACS880 is compatible with many communication protocols.

—
Input/output extension modules.

Input/output extension modules
Standard input and output can be extended by using optional analog and digital input/output extension modules. The modules are easily installed in the extension slots located on the drive.

If there are insufficient I/O extension slots in the drive, the FEA-03 module can increase the number of slots. The FEA-03 has two option slots for digital I/O extensions and speed feedback interface modules. The connection to the control unit is via an optical fiber link, and the adapter can be mounted on a DIN rail (35 × 7.5 mm).

—
Analog and digital input/output extension modules

Option code	Ordering code for loose item	Description	I/O module
+L501	68805368	4×DI/O, 2×RO	FIO-01

+L515	3AUA0000108669	2×F-type option extension slots	FEA-03
+L525	3AUA0000141436	2×AI (mA/V), 2×AO (mA)	FAIO-01
+L526	3AUA0000141438	3×DI (up to 250 V DC or 230 V AC), 2×RO	FDIO-01

+ ABB drives and OPC UA

A future proof and effective solution for data and asset management

Security, ease of use and interoperability are all features of OPC UA. ABB drives support OPC UA for data collection which means that ABB drives are equipped with OPC UA Server.

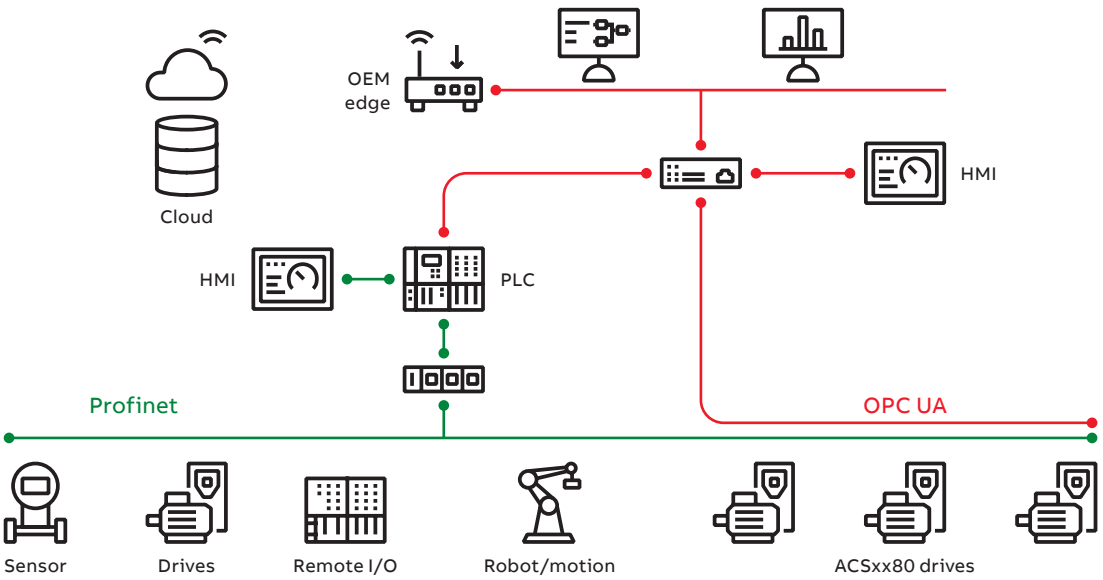
Any OPC UA Client can be connected to ABB drives and start collecting data for their purposes. By this way for example active faults, event history, active value such as power, torque and current can be accessed by OPC UA Clients securely.

This data can be used in process monitoring, asset management and for centralized event management on site, edge or in cloud via a gateway.

Benefits

- Provide a secure connection
- Server-client based connection between devices
- Event logger visibility
- A harmonized information model is provided across drive portfolio
- Utilizes single wire connection to the drive, Ethernet based protocol
- ABB or a third part OPC UA Client can fetch the data from the drive
- OPC UA Server is embedded into the PROFINET, Modbus TCP and EtherNet/IP fieldbus adapters

OPC UA is a communication protocol for interoperability and data exchange between different devices, systems and applications.



https://new.abb.com/drives/connectivity/opc-ua-for-drives

+ Feedback interface and DDCS communication options

— 01 FEN-01 TTL encoder interface module
— 02 FDCO-01 DDCS communication module

Speed feedback interfaces for precise process control

ACS880 drives can be connected to various feedback devices such as HTL pulse encoders, TTL pulse encoders, absolute encoders and resolvers. The optional feedback module is installed in the option slot on the drive. It is possible to use two feedback modules at the same time, either of the same type or different types *).

*) Excluding FSE-31.

— 01

— **Feedback interface modules**

Option code	Ordering code for loose item	Description	Feedback module
+L517	68805422	2 inputs (TTL pulse encoder), 1 output	FEN-01
+L518	68805830	2 inputs (SinCos absolute, TTL pulse encoder), 1 output	FEN-11
+L516	68805848	2 inputs (Resolver, TTL pulse encoder), 1 output	FEN-21
+L502	68978955	1 input (HTL pulse encoder), 1 output	FEN-31
+L521	3AXD50000023272	Pulse encoder interface for functional safety (for more details, see section “Safety options”)	FSE-31

DDCS communication option modules

The FDCO-0X optical DDCS communication options are add-on modules on the ACS880 industrial drive’s control unit. The modules include connectors for two fiber optic DDCS channels. The FDCO-0X modules make it possible to perform master-follower and AC800 M communication. An alternative drive-to-drive communication method is to use the standard RS485 connection.

— 02

— **Optical communication modules**

Option code	Ordering code for loose item	Description	Module

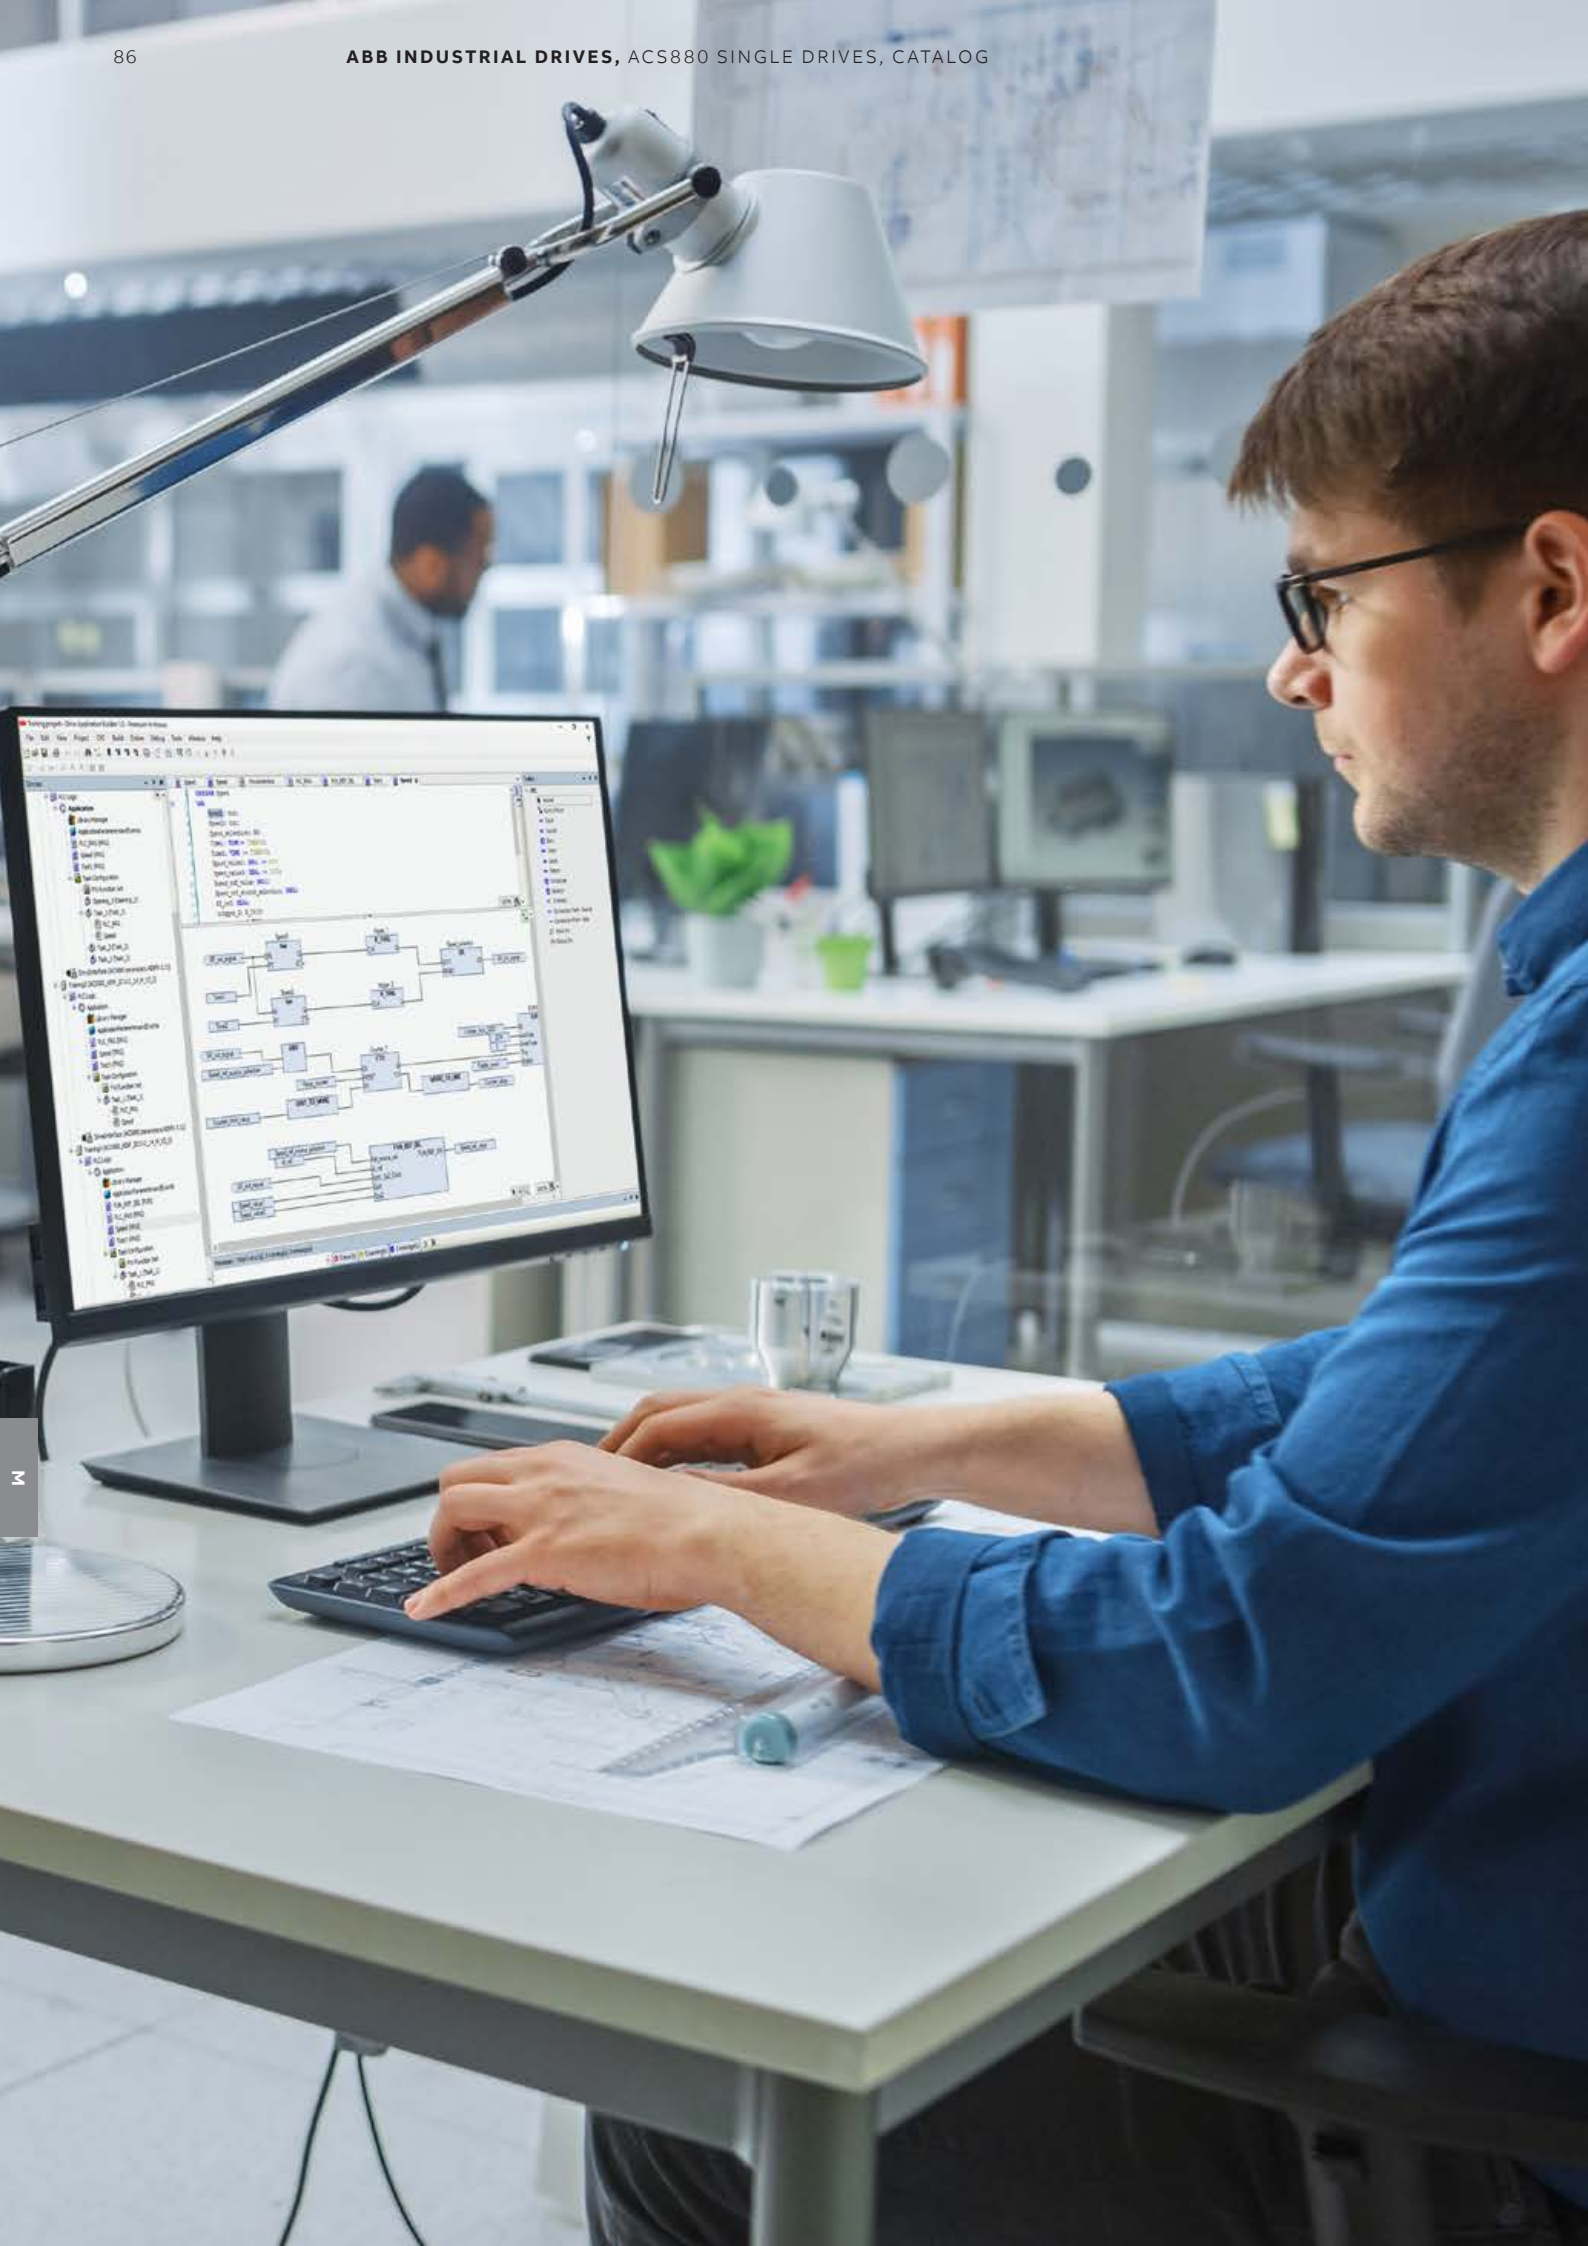
+L508	3AUA0000107393	Optical DDCS (5 Mbd/10 Mbd)	FDCO-02



+ Functional Safety offering

Ensure the safety of your machinery and processes with drive-based functional safety

ABB offers various safety devices and tools for designing safer machines and processes while utilizing drives. Our drive-based functional safety offering includes drives that come with integrated safety features and extended safety functionality all in one package. Safe connection between drive and PLC is established using safety communication protocols PROFIsafe or CIP Safety™ or connectivity. ABB's functional safety design tool speeds up the design process when building safety solutions.

ABB all-compatible drives have Safe Torque Off (STO) as the standard. A wide range of functional safety modules are available as options:

FSO-12 and FSO-21 provide an easy way to extend safety functions in the ACS880 and DCS880 series drives. These plug-in modules are installed and cabled inside the drive, enabling different safety functions and diagnostics in one compact and reliable module.

FSO-12 and FSO-21 offer several safety functions including:
- Safe Stop 1 (SS1, as SS1-r and SS1-t implementations),
- Safe Stop Emergency (SSE)
- Safe Brake Control (SBC)
- Safely Limited Speed (SLS)
- Safe Maximum Speed (SMS)
- Prevention Of Unexpected Start-up (POUS)

FSO-21 featuring two additional functions:
- Safe Direction (SDI)
- Safe Speed Monitoring (SSM) (requires the pulse encoder interface module (FSE-31)

Both safety function modules are capable of monitoring safe speed in encoder less mode (in open loop). This is made possible when monitoring is based on a pre-set motor profile, speed profile and speed estimation of the safety functions module.

CIP Safety™ functions module, FSCS-21 and PROFIsafe safety functions module, FSPS-21, are easy to use, cost-efficient and compact modules that helps you to connect drives seamlessly to a safety PLC. Modules are easy to install and configure and is suitable for ensuring the safety of equipment that reduces the risk of accidents for people working with a variety of applications.

- Compatible drives: ACS380, ACS580, ACS880
- Safety functions: Safe Torque Off (STO), Safe Stop 1 (SS1-t)
- The highest safety levels: SIL 3/PL e (Safety Integrity Level/Performance level)

For more information, please see new.abb.com/drives/functional-safety

Functional safety design tool

The functional safety design tool (FSDT-01) helps you design and calculate safety integrity levels (SIL)/performance levels (PL) for safety functions and generate safety calculation reports. It is a Windows application, which is a support tool for performing functional safety modeling, design, calculations, and verification for machine functional safety. The tool is aimed to simplify the process of safety function design and verification and to generate documentation to support compliance to the required machinery safety standards and the European Machine Directive for safety.

For more information, please see new.abb.com/drives/functional-safety/functional-safety-design-tool

+ Certified safety built-in with ACS880 drives

—
ACS880 drive with FSO-21, FSE-31 and FPNO-21.

Integrated safety
Integrated safety reduces the need for external safety components, simplifying configuration and reducing installation space. The safety functionality is a built-in feature of ACS880, with Safe Torque Off (STO) as standard. The STO function corresponds to an uncontrolled stop in accordance with stop category 0 of EN 60204-1. Additional safety functions can be commissioned with the optional and compact safety functions module. ACS880 drives offer functional safety, with or without an encoder. The drive's functional safety is designed in accordance with EN/IEC 61800-5-2 and complies with the requirements of the European Union Machinery Directive (2006/42/EC).

The safety functions are certified by TÜV Nord and comply with the highest performance requirements (SIL3/PL e) in machinery safety. [1)]

The safety functions module can also be ordered separately and installed afterwards to the drive.

PROFIsafe safety functions module, FSPS-21, CIP Safety™ functions module, FSCS-21,
support STO and SS1-t safety functions. As the functions are automatically configured, no additional safety settings are required in the drive.

Safety functions modules, FSO-12 and FSO-21,
support a wide range of safety functions. The functions are configured with the Drive Composer pro PC tool, which provides an easy-to-use graphical user interface. Larger safety systems can be built using PROFIsafe over a PROFINET connection between a safety PLC (such as AC500-S) and the ACS880 drive. The connection is achieved by adding a PROFINET adapter, FPNO-21, to the drive.

Supported safety functions:
- Encoderless: SS1-t, SS1-r, SLS, SBC, SMS, SSE, POUS, STO
- With encoder (requires FSO-21 + FSE-31): SDI, SSM, SS1-t, SS1-r, SLS, SBC, SMS, SSE, POUS, STO

Pulse encoder interface module, FSE-31,
provides safe encoder data to the safety functions module FSO-21 and can simultaneously be used as a feedback device for the drive. FSE-31 requires an FSO-21 safety functions module and supports HTL safety encoders.

Thermistor protection modules, FPTC-01 and FPTC-02
Safe Motor Temperature (SMT) can be achieved by using FPTC thermistor protection modules. [1)]

+L537+Q971	3AXD50000024924	ATEX-certified thermistor protection module FPTC-02 , Ex II (2) GD [1)]	FPTC-02

[1)] Thermistor modules comply with SIL2/PLc. [2)] Plus codes are valid for ACS880-01/11/31/04/04F and -14/34 frame R11.

Safety function	Description	Supported functions			
		FSPS-21 FSCS-21	FSO-12 without encoder	FSO-21 + FSE-31 + HTL encoder	
Safe Torque Off STO	Brings the drive safely to a no-torque state, i.e., switches off the drive output to the motor, motor speed then coasts to a stop. ACS880 has Safe Torque Off as standard.	x	x	x	Safe Stop 1 SS1-t SS1-r	Brings the machine to a stop using a monitored deceleration ramp. It is typically used in applications where the machinery motion needs to be brought to a stop (stop category 1) in a controlled way before switching over to the no-torque (STO) state	x (SS1-t)	x (SS1-t) (SS1-r)	x (SS1-t) (SS1-r)	Safe Stop Emergency SSE	On request, can be configured to either activate STO instantly (category 0 stop) or first initiate motor deceleration and then, once the motor has stopped, activate the STO (category 1 stop).		x	x	Safe Brake Control SBC	Provides a safe output for controlling the motor's external (mechanical) brakes, with STO.		x	x	Safely Limited Speed SLS	Ensures that the specified speed limit of the motor is not exceeded. This allows machine interaction to be performed at slow speed without stopping the drive. The safety function module comes with four individual SLS settings for speed monitoring.		x	x	Safe Maximum Speed SMS	Monitors the speed of the motor to ensure that it does not exceed the configured maximum speed limit.		x	x	
Prevention Of Unexpected Start-up POUS	Ensures that the machine remains stopped when people are in the danger area.		x	x	Safe Direction SDI	Ensures that rotation is allowed only in the selected direction. (Use only FSO-21 when HTL encoder is not needed. If HTL encoder is needed, both FSO-21 and FSE-31 must be used.)			x	Safe Speed Monitor SSM	Provides a safe output signal to indicate whether the motor speed is between user-defined limits (available only with FSO-21).			x	
ABB Ability™ Digital Powertrain
Condition monitoring for powertrains

Accurate real-time information about powertrain events. When you have the facts, you can make the right decisions.

ABB Ability™ Digital Powertrain
The ABB Ability™ Digital Powertrain enables you to remotely monitor the health and performance of entire powertrains, including drives, motors and applications, such as pumps. The data collected from the connected equipment can be accessed and analyzed remotely, providing a better understanding of the health and energy efficiency of the entire process.

ABB Ability™ Condition Monitoring for drives
ABB Ability™ Condition Monitoring for drives is a key element of the Digital Powertrain. The services are designed to provide key information about drive events and changes in behavior to ensure your equipment is always available, reliable and well maintained.

The service can be tailored to fit your needs. Our standard package gives you industry-leading monitoring capabilities – whether you want to view the status of your assets through ABB's Internet portal or integrate this data with your existing monitoring systems.

The standard package includes the following services:
- Self-service condition monitoring
- Alarm Management
- Asset Health
- Team Support
- Backup Management

The standard package can be supplemented with optional services:
- Offline Data Collection
- Expert Reports
- Remote Assistance
- Plug & Play Connectivity
- Monitoring Service

Solid fact-based decision making
Get the facts and the history to help you run your operations better and more safely.

Always stay one step ahead of problems
Recognize early signs of possible failures and assess the risks before they turn into serious operational issues.

Find the root cause of process issues
Remotely access data from ABB drives' built-in sensors to track the cause of problems. Get back to smooth operation quickly with data backups.

Remotely analyze and optimize drives
Get critical drive information anywhere anytime – even in difficult to access sites, or when a site visit is impossible.

Customers can configure powertrains and customize the digital service plan

1 **Choose one or more assets you want to protect**

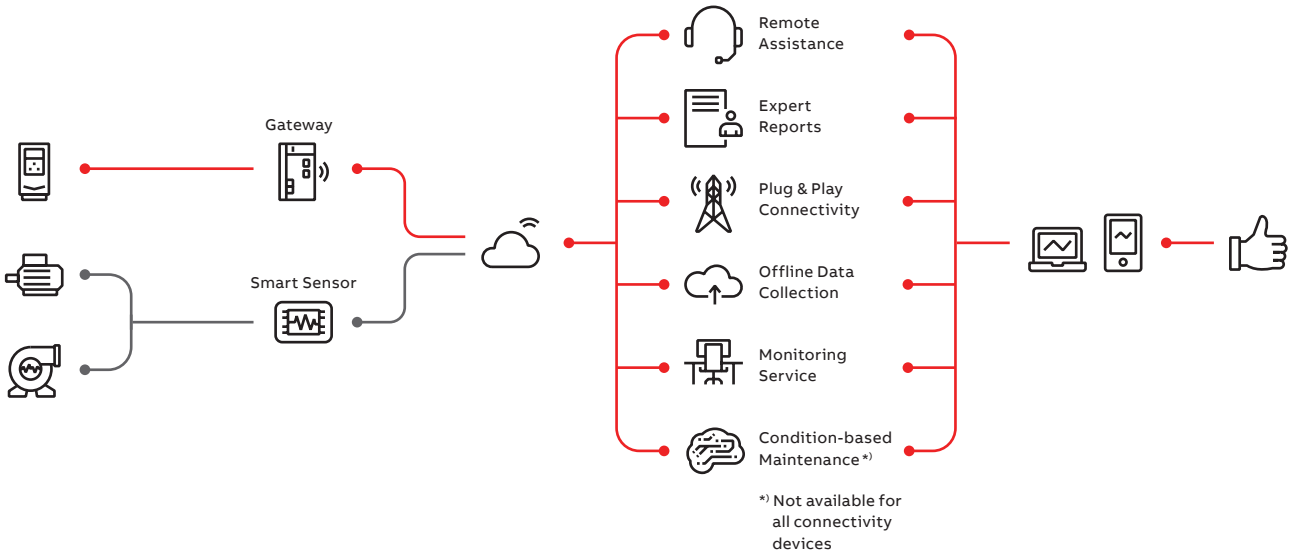
2 **Install the connectivity device**

3 **Activate access to the Condition Monitoring basic feature**

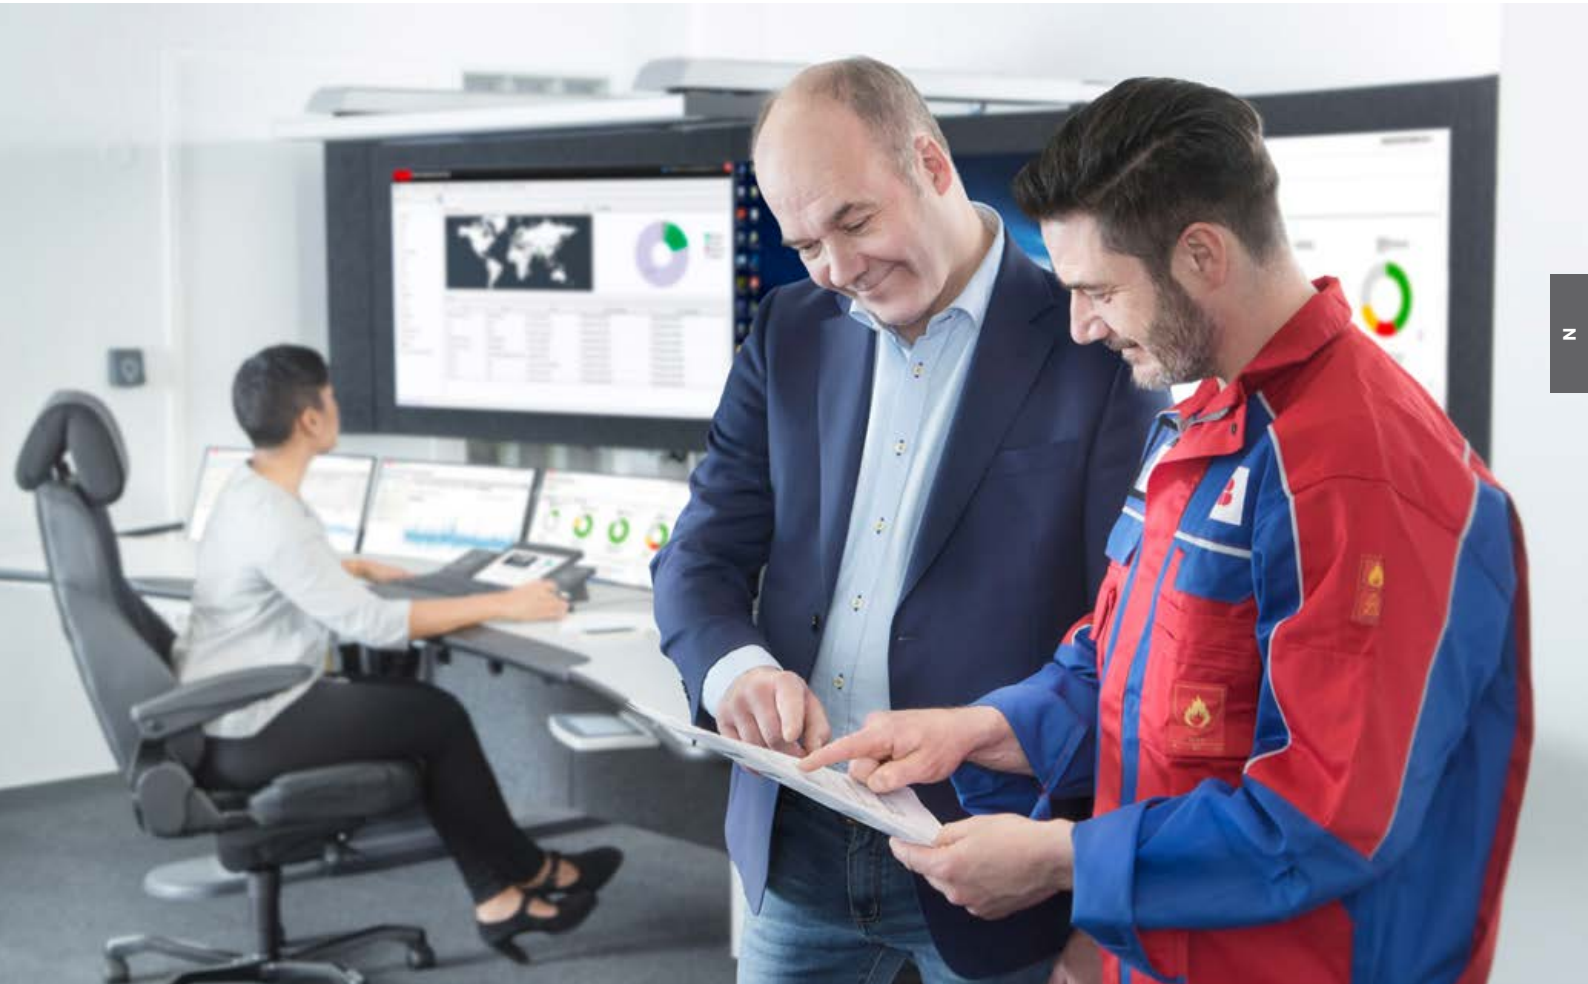
4 **Pick optional features and customize**

5 **Start monitoring**

6 **Enjoy the customized service**



*) Not available for all connectivity devices



Connectivity devices enabling remote condition monitoring of drives

NETA-21

NETA-21 connects the drive to the cloud via the Internet or local Ethernet network.

The remote data helps you base your decisions on solid facts and run your operations better and more safely.

Remote monitoring helps you recognize early signs of potential failures and react before a problem occurs. You can also remotely access the data from ABB drives to analyze and find the root cause of a problem.

With remote access, you can analyze and optimize drive information anywhere, even on sites that are difficult to access, or when a site visit is impossible.

- The module comes with a built-in web server and requires no Flash/Java plugins
- In the absence of a customer local area network, it can be connected via a mobile network router (either Ethernet or USB network adapter)
- One module can be connected to several drives at the same time

NETA-21 *)	Ordering code	Description
	3AUA0000094517	2 x panel bus interface
		max. 9 drives
		2 x Ethernet interface
		SD memory card
	+K496	Connectivity for wired remote monitoring with NETA-21
	+K497	Connectivity for wireless remote monitoring with 4G modem and NETA-21

*) Following options available for ACS880-07, -17 and -37

Connectivity Panel *)

Connectivity Panel offers easy plug & play installation and commissioning with built-in connectivity.

- Built-in NB-IoT wireless module with strong signal penetration even if drive is underground or in cabinet
- High efficiency antenna for reliable connection
- Industrial SIM for best reliability including mobile data plan *)
- Bluetooth® enables use of Mobile apps and PC tools

*) Not available in all countries and for all drives. Please check availability of panel and services with your local ABB representative.

ACS880 drives are compatible with the extensive ABB product offering

Programmable Logic Controllers PLCs
The AC500, AC500-eCo, AC500-S and AC500-XC scalable PLC ranges provide solutions for small, medium and high-end applications. Our AC500 PLC platform offers different performance levels and is the ideal choice for high availability, extreme environments, condition monitoring, motion control or safety solutions, and applications where the highest level of security is mandatory.

All-compatible drives portfolio
The all-compatible drives share the same architecture: software platform; tools; user interfaces; and options. However, there is an optimal drive, from the smallest water pump to the biggest cement kiln, and everything in between.

AC motors
ABB's low-voltage AC motors are designed to save energy, reduce operating costs and minimize unscheduled downtime. General performance motors ensure convenience, while process performance motors provide a broad set of motors for the process industries and heavy-duty applications.

Safety products
ABB safety products help machine builders create production-friendly and safe work environments for operators. We deliver machine safety solutions for single machines or entire production lines. Our long experience of helping customers making solutions for demanding environments has made us experts in combining production demands with safety demands for production-friendly solutions.

Control panels
CP600-eCo, CP600 and CP600-Pro control panels offer a wide range of features and functionalities for maximum operability. ABB control panels are distinguished by their robustness and easy usability, providing all the relevant information from production plants and machines at a single touch. Also, includes the CCE protocol – ABB's internal drive communication protocol – for seamless integration with ABB drives, enabling efficient parameter read/write access and real-time monitoring and visualization.

Best-in-class performance, energy efficiency and reliability with ABB motor and drive package

High Dynamic Performance (HDP) motors with ACS880 drives
ABB's HDP motors are offered in frame sizes 80 to 400 up to megawatt-class, with water-cooled and high-speed variants available in selected frame sizes. ABB's HDP motors have a very high power density, which means that they provide more power to the machine applications than conventional machine motors. ABB's HDP motors are the optimal solution for high-torque machine applications such as extruders, cranes, test benches, etc.

ABB HDP motors are always used with a drive. To make full use of ABB's VSDs – including flexibility to optimize processes and control, reliability to reduce downtime, and efficiency to reduce energy use and carbon emissions – the motor's technology solution must be up to the challenge. ABB's HDP motors are designed to enable fast motion control and high maneuvering precision due to their low inertia and high overload capacity.

Induction motors and ACS880: a reliable combination
Induction motors are used throughout industry in applications that demand robust and high-enclosure motor and drive solutions. ACS880 drives fit perfectly with this type of motor by providing comprehensive functionality, yet simple operation. The drives are ideal for environments that require a high degree of protection and a small footprint. ACS880 drives come with DTC as standard, ensuring high-speed accuracy. Our motors and drives provide the perfect foundation for energy efficiency while delivering capabilities such as exceeding the nominal motor speed when maximum power is needed.

Our low-voltage motors for explosive atmospheres and low-voltage industrial drives have been tested and certified to verify that when correctly dimensioned, they are safe to use in explosive atmospheres. ABB drives can also be used with non-ABB Ex motors with ATEX-certified thermistor protection. If this protection is not used, the motor and drive combination must be either type-tested or combined-tested for potentially explosive atmospheres by the customer, motor manufacturer or a third party. It is also important to verify that the motor can be used with ABB variable speed drives.

Permanent magnet motors and ACS880: smooth operation
Permanent magnet technology is used for improved motor characteristics in terms of energy efficiency and compactness. This technology is particularly suitable for low-speed control applications, as in some cases it eliminates the need to use gearboxes. The actual characteristics of different permanent magnet motors can vary considerably. Even without speed or rotor position sensors, ACS880 drives with DTC can control most types of permanent magnet motors.

Externally excited synchronous machines
ACS880 externally exited synchronous machine control is an option for the ACS880 multidrive inverter unit offering in R8i-based frames. The main difference between ACS880 externally excited synchronous machine control and other machine control modes is the rotor current, which in ACS880 externally excited synchronous machine control, is supplied to the rotor from the excitation unit (EXU) through brushes.

Variable speed synchronous motors are often used in demanding applications where variable speed delivers significant benefits. Rolling mills, mine hoists, pumps, extruders, compressors and the main propulsion system in ships are typical examples of variable speed applications. The ACS880 inverter unit has ordering option (+N8052) for the excitation unit, which monitors and controls the excitation of the synchronous motor.

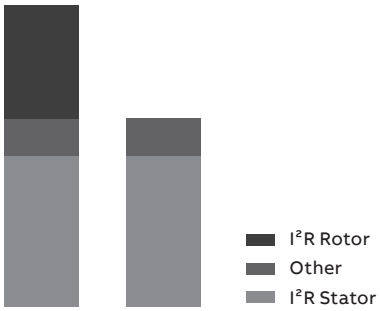
IE5 Synchronous reluctance motors and ACS880: optimized energy efficiency
Combining ACS880's control technology with our Synchronous reluctance (SynRM) motors provides an IE5 motor and drive package that ensures high energy efficiency, reduces motor temperatures and provides a significant reduction in motor noise. A lower temperature results in better motor reliability and longer motor life.

Synchronous reluctance motors

Ultimate efficiency and reliability to optimize your cost of ownership

Traditional induction motor

IE5 SynRM motor



Losses IM vs. SynRM

Innovation inside
The idea is simple. Take a proven conventional stator technology and an innovative rotor design. Then combine them with an ABB machinery drive loaded with software with versatile features. Finally, optimize the whole package for applications such as compressors, conveyors, pumps, extruders, fans, and many other variable and constant torque applications.

Magnet-free design
Synchronous reluctance technology combines the performance of a permanent magnet motor with the simplicity and service-friendliness of an induction motor. The new rotor has neither magnets nor windings and suffers virtually no power losses. And because there are no magnetic forces in the rotor, maintenance is as straightforward as with induction motors.

Superior reliability to minimize the cost of not running
International Efficiency class IE5 Synchronous reluctance motors (SynRM) have very low winding temperatures, which increases the reliability and lifetime of the winding. More importantly, a cool synchronous reluctance rotor means significantly lower bearing temperatures – an important factor because bearing failures cause about 70 percent of unplanned motor outages.

Perfect for retrofits
The SynRM package is a perfect solution for motor retrofits. The IE5 SynRM is the same size as an IE3 induction motor, eliminating the need for mechanical modifications. Meanwhile, the increased efficiency will reduce the payback time of the investment.

Full motor control, down to zero speed
Many processes require accurate speed control. SynRM always runs at the reference speed with practically no error, without an encoder. Even the best slip compensation systems in an induction motor inverter will never match the precision of SynRM. Sometimes your application may require you to run your motor at slow speeds. If you are using SynRM, and your drive cannot provide the necessary torque, it may trip. ABB drives provide full control and torque down to zero speed, even without speed sensors.

For all applications
This is important if you are planning to use the motor with applications other than quadratic torque applications like pumps and fans. Our drives provide full SynRM motor control for constant torque applications such as extruders, conveyors and wire drawing machines.

Certified safety with IE5 SynRM Increased safety motors and Drives in hazardous areas
ABB is the first manufacturer in the world to offer the combination of IE5 ultra-premium efficiency and Increased safety. ABB IE5 SynRM increased safety motors for Zones 1 and 2 are fully tested and certified for explosive atmospheres with drives. Increased Safety SynRM motors provide all the benefits of SynRM motors such as ultra-premium efficiency, higher reliability and reduced maintenance.

SynRM technology	Benefit
Higher efficiency IE5	Lowest energy consumption
No rare earth metals	Environmental sustainability
Magnet-free rotor	Easy service
Lower winding and bearing temperatures	Longer lifetime, extended service intervals
Better controllability	Accurate speed and torque control
Lower noise level	Better working and living environment
Same size with IE3	Perfect for retrofits

Our service expertise, your advantage

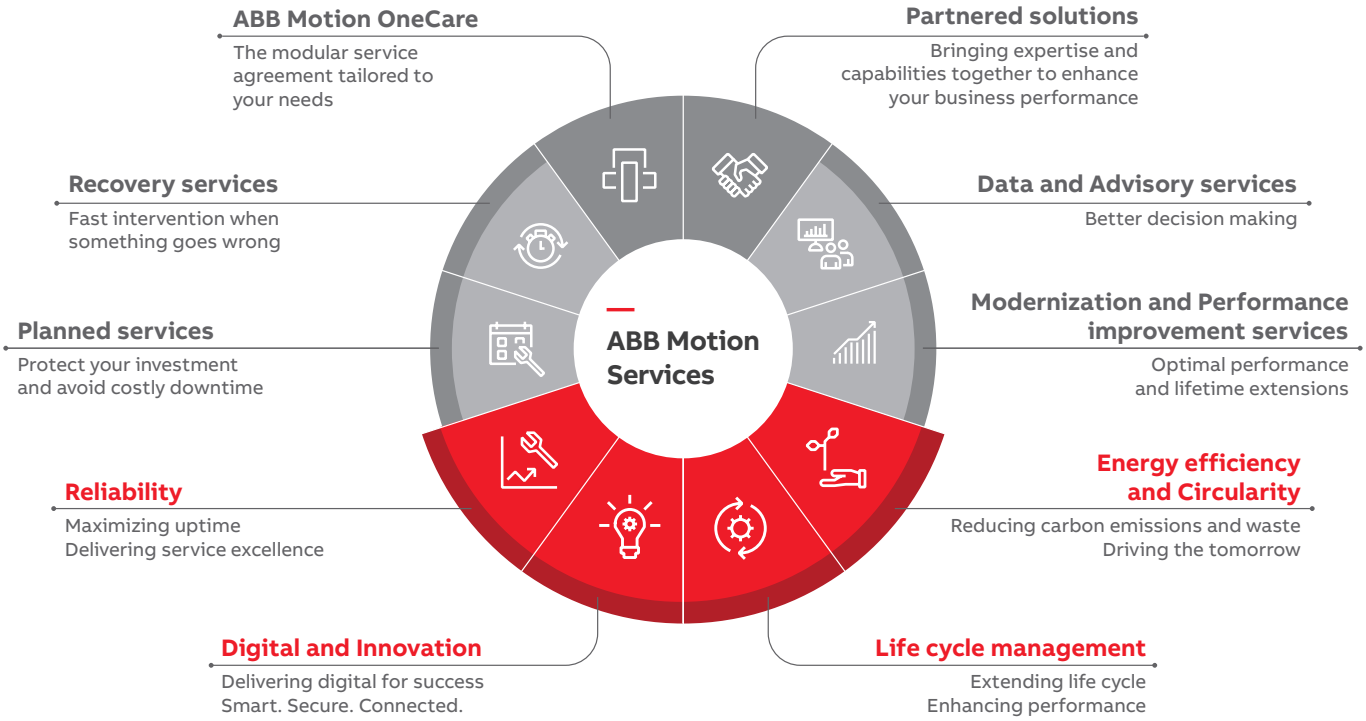
ABB Motion Services helps customers around the globe by maximizing uptime, extending product life cycle, and enhancing the performance and energy efficiency of electrical motion solutions. We enable innovation and success through digitalization by securely connecting and monitoring our customers' motors and drives, increasing operational uptime and improving efficiency. We make the difference for our customers and partners every day by keeping their operations running profitably, safely and reliably.

With a service offering tailored to your needs, ABB Motion Services maximizes the uptime and extends the life cycle of your electrical motion solutions, while optimizing their performance and maximizing your energy efficiency gains throughout your applications' lifetime. We help keep your applications turning profitably, safely and reliably.

Digitalization enables new smart and secured ways to prevent unexpected downtime while optimizing the operation and maintenance of your assets. We securely connect and monitor your motors, drives or your entire powertrain to our easy-to-use cloud service solutions. Connecting your applications also gives you access to our in-depth service domain expertise.

We quickly respond to your service needs. With our partners, local field service experts and service workshop networks, we provide and install original spare parts to help resolve any issues and minimize the impact of unexpected disruptions.

Our tailored service offerings and digital solutions will enable you to unlock new possibilities. Not only are we your premier supplier of motion equipment, we are your trusted partner and advisor offering support throughout your assets' lifetime. We ensure your operations run profitably, safely and reliably and continue to drive real-world results, now and in the future. Our service teams work with you, delivering the expertise needed to keep your world turning while saving energy every day.



OUR EXPERTISE
YOUR ADVANTAGE

ABB Drives Life Cycle Management
A life time of peak performance

You're in control of every life cycle phase of your drives. At the heart of drive services is a four-phase product life cycle management model. This model defines the services recommended and available throughout drives lifespan.

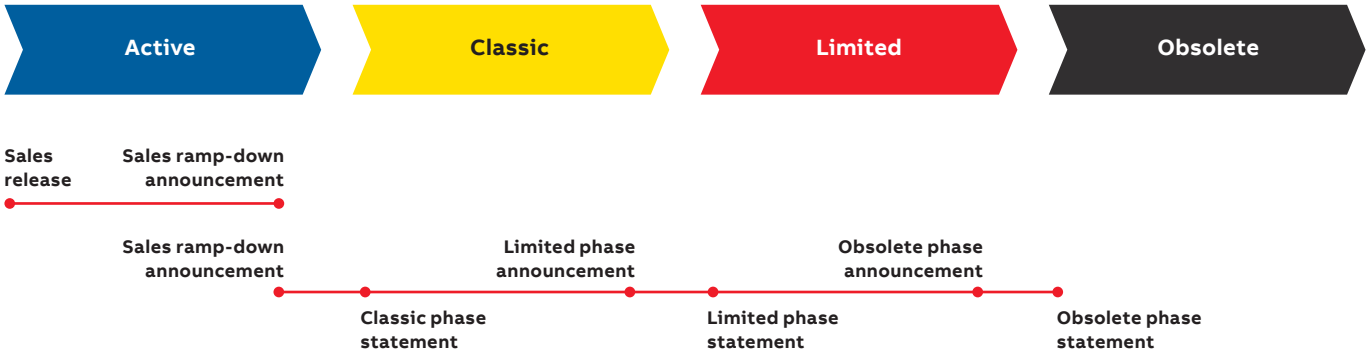
Now it's easy for you to see the exact service and maintenance available for your drives.

	Active	Classic	Limited	Obsolete
Product	Product is in active sales and manufacturing phase	Serial production has ceased. Product may be available for plant extensions, as a spare or for installed base renewal	Product is no longer available	Product is no longer available
Services	Full range of life cycle services is available	Full range of life cycle services is available. Product enhancements may be available through modernizations	Limited range of life cycle services is available. Spare parts availability is limited to available stock	Replacement and end-of-life services are available

Keeping you informed throughout the life cycle

We notify you every step of the way using life cycle status statements and announcements.

Your benefit is clear information about your drives' status and precise services available. It helps you plan the preferred service actions ahead of time and make sure that continuous support is always available.



Sales release
Details about product portfolio and release schedule.

Sales ramp down announcement
Last time buy and last deliveries dates, informed well in advance.

Life cycle phase change announcement
Early information about the upcoming life cycle phase change and affects on the service availability. Informed well in advance, minimum six months prior to the change.

Life cycle phase statement
Information about the current life cycle status, product and services availability and recommended actions. Plan for the next life cycle phase transition.

[2] For frame sizes R1 to R9, 380 to 500 V (-01). For frame sizes R6 to R11, 380 to 500 V (-07).
[3] For frame sizes R1 to R9, 380 to 500 V, and frame sizes R3 to R9, 690 V (-01). For frame sizes R6 to R11, 380 to 690 V (-07).
[4] For frame sizes R6 to R9, 380 to 500 V, and frame sizes R7 to R9, 690 V (-01). For frame sizes R6 to R9, 380 to 500 V and frame size R6, 690 V and frame sizes R10 to R11, 380 to 690 V (-07).
2nd environment C4 for frame sizes R1 to R5, 380 to 500 V, and frame sizes R3 to R6, 690 V (-01).
[5] Frame sizes R1 to R4 built in and R5 to R9 as selectable option
[6] 2×R8i
[7] 2×D8T to 4×D8T
[8] Check availability from local ABB
[9] D8T, 2×D7T and 2×D8T
[10] R8i to 2×R8i, 400 to 500 V. R8i to 3×R8i, 690 V
[11] 3×R8i, 400 to 500 V. 4×R8i and 6×R8i, 690 V
[12] ACS880 marine type approvals and type approved drives are listed at https://new.abb.com/drives/segments/marine/marine-type-approvals.
[13] For cabinet-built drives (-07)
[14] Available only with IP20 (+P940 or +P944)
[15] For 1140A-3 and 1070A-5 (-07 nxR8i).
[16] Pending
[17] Three option slots are available for I/O extension, speed feedback, communication protocol and functional safety options. FSO-xx can also be mounted on a DIN rail by using a separate installation kit. DIN rail mounting does not consume the drive’s option slots. With frames R6 to R11, it is possible to mount the FSO-xx inside the drive without using the drive’s option slots.
[18] For frame sizes R8 and R11, 380 to 500 V (-17, -37).
[19] For frame size R8, 380 to 500 V (-17,-37). As standard for R11, 380 to 690 V.
[20] Only for frame size R11
[21] Only for frame size 1xR8i, 380 to 500 V (-17,-37).
[22] For frame size R8, 380 to 500 V (-17,-37). For R11, 380 to 690 V, please contact your local ABB.
[23] For availability and further information, please contact your local ABB office.
[24] Three option slots are available for I/O extension, speed feedback, communication protocol and functional safety options.
The slot number for I/O and encoder options can be extended with the FEA-03 option. Please note that functional safety and communication protocol adapters cannot be used with FEA-03.
[25] Three option slots are available for I/O extension, speed feedback, communication protocol and functional safety options.
[26] For ACS880-37LC
[27] Common mode filter (+E208) is standard for 690 V devices.
[28] Available for voltages from 380 to 500 V.
[29] Frames R5–R9
[30] Marin type approvals pending for R6 and R7
